

## **Bug corrections in Flip It 2.1**

Flip It 2.1 has corrected the following bugs with 2.0.

- 1) Computer making moves off the board.
- 2) Score not being updated until after "Game Over" message appears.
- 3) Screen not refreshing properly when window resized/redisplayed during the computer's move.

In addition, the "easy" level has been made slightly more intelligent. This was necessary to correct bug number one above.

### **To upgrade:**

1. Copy the files into your current FlipIt directory.
2. For users upgrading from the shareware version, remove any saved games, since the file format was changed in version 2.x to accommodate new features.

### **To install:**

1. Copy the files into the desired directory on your hard drive.  
Example: C:\GAMES\FLIPIT
2. Open the "Games" group in the program manager.
3. Create a new item by choosing File, New, Item, OK.
4. Enter the Command Line needed to launch Flip It.  
Example: C:\GAMES\FLIPIT\FLIPIT.EXE
5. Choose OK.

Enjoy!
