

## Installment Requirements to run JewelPro

Pentium 90 or Higher, Min. 24 MB of memory  
20 MB of free disk space Higher Recommended  
Windows 95/98/WinMe/Win2000/WinNT  
Running 24 bit High Color Recommended  
Color Printer

You must have Internet Explorer 3 or Higher Recommended  
(current version available as of this writing is IE 5.5) installed  
(but does not have to be the default viewer) to view the help files.

Unzip the contents of the JPCDL.ZIP file into an empty or temp folder  
start the installation process by double clicking the Setup file.

If you receive a dialog saying some files are out of date and you will have to  
restart.(This is due to if your system does not have the latest visual basic 6 runtime files installed)  
Click ok after you reboot run the setup program again.

Choose a directory to install to JewelPro will run from any directory you  
choose except the Root Drive example of a Root Drive(C:\).

How ever it is recommended you install to the default chosen.

Default: \Program Files\JewelPro

### **Install problems:**

**If you have to reboot due to some files being out of date then  
if after you reboot and you continue to receive  
an error saying it cannot read source file RBT####.tmp file**

**Step 1:**

**Delete the **Setup.exe** file**

**Step 2:**

**Within the same folder you will find the file **AltSetup.exe**  
rename this file to: **Setup.exe**  
and then retry the installation**
