

# The Volume Control

## Introduction

The Volume Control enables you to regulate the volume and stereo balance at which sound is played. You can use the Volume Control with the Audio Recorder during playback. If you are playing multiple sources, you can use the Mixer to combine them, with the Volume Control as a master regulator.

The Volume Control can receive input from a microphone, a cassette tape player, a compact disc player, or any other line-in source.

[Volume Control Menu Commands](#)

## **Starting the Volume Control**

- Open the Audio Applications program group and double-click the Volume Control icon.

OR:

- From the Audio Recorder open the Options menu and choose the Volume Control command.

OR:

- From the Mixer menu choose Volume Control.

## The Volume Control Window

- To adjust the stereo balance, drag the horizontal sliding bar left or right.
- To adjust the volume, drag the vertical sliding bar up or down.
- To turn the sound off, click the **Mute** button. The mute button appears pressed.
- To turn the sound back on, click the **Mute** button again.

## **Volume Control Menu Comands**

Turn on **Always On Top** to display the Volume Control on top of other windows.

**Mixer** displays the Mixer window if you want to mix the playing of sounds from several sources.

**Help** displays information on how to use the Volume Control.

**About Volume Control** gives the version number and copyright information.
