Windows Mouse Cursors

Windows mouse cursors are used to indicate the current state of the mouse pointer. The most common is the Arrow cursor, which is used for general navigation. Other cursors include the IBeam cursor for text selection, the Wait cursor for busy operations, and the AppStarting cursor for application launch. The Help cursor is used to display help information. The No cursor is used to indicate that an operation is not allowed. The AppStarting cursor is used to indicate that an application is starting. The Help cursor is used to indicate that help information is available. The No cursor is used to indicate that an operation is not allowed. The AppStarting cursor is used to indicate that an application is starting. The Help cursor is used to indicate that help information is available.
