## Virus Info Base

### 1.1 Butonic V1.1

Name : Butonic V1.1

Aliases : Bahan

Type/Size : Boot/1024

Clone : No Clones

Symptoms : No Symptoms

Discovered : 03-04-91

Way to infect: Boot infection

Rating : Harmless

Kickstarts : 1.2/1.3

Damage : Overwrites boot.

Removal : Install boot.

Comments : The ButonicV1.1 virus uses the cool-capture to stay resident in memory. After 15 resets the virus gives out a message:

```
BUTONIC`s VIRUS 1.1  
GREETINGS TO HACKMACK
```

Further the virus uses the DoIO()-Vector to infect other disks.

If you are pressing the right mousebutton and the s-key while you are booting, the generationsnumber will be shown:

```
<GENERATION NR. XXXXX>
```

You can't read this texts in the bootblock

---

because they are coded.  
Sometimes the virus is called BAHAN because  
you can read this string in the bootblock.  
But This string is only the ASCII-representation  
of:

```
CLR.W D1  
SWAP D1  
RTS
```

Click on this gadget to see a Demo of the Butonic  
V 1.1 virus. Push left mouse button to return.
