Multimedia PC Marketing Council

Welcome to the third edition of the Multimedia PC Titles Catalog.

The Titles Catalog is published by the Multimedia PC Marketing Council, an organization which is dedicated to supporting the Multimedia PC computer platform for the benefit of end-users, software developers, and hardware manufacturers around the world.

The impetus for the the MPC platform was provided by the Multimedia PC Level 1 Specification, which was developed to serve as a "baseline" standard for the implementation of multimedia as an extension of the PC standard. Published in 1990 as the result of a collaboration of many industry companies, the MPC Level 1 Specification is accepted around the world as the standard for the hardware implementation of multimedia on the PC. This standard launched the traditional PC into the dynamic world of sound, graphics and animation. In May of 1993, the Multimedia PC Level 2, or MPC2 Specification was announced, providing an enhanced performance standard for higher levels of multimedia functionality.

Look for these logos when choosing Multimedia PC software and hardware.

The Multimedia PC certification mark was established by the Council to encourage the worldwide use of the standard Multimedia PC computing platform. The mark is licensed by over 130 hardware and software vendors to certify that products meet or exceed the MPC Specifications. End-users can be assured that software bearing the Multimedia PC mark is designed to work on computer systems or upgrade kits that meet the MPC Specifications.

We have entered into an exciting new era of personal computing-- one that fully involves your senses as you experience the dynamic world of multimedia information. In the pages that follow you'll discover interactive applications that inspire, educate, inform and entertain. More than any other information source, Multimedia PC applications let you become an active participant in the world around you.

What You Need To Know

Multimedia PC computing is not just a vision for the future. Its here today. Multimedia computing is simple in concept: the integration of sound, animation, photo-quality images and video with text and graphics. This simple idea will have a remarkable impact on the way people use computers.

The Multimedia PC Marketing Council has developed a standard multimedia computer specification: the Multimedia PC. Based on the standard desktop PC already used by millions, the Multimedia PC provides users with an affordable approach to multimedia computing that preserves their investments in PC software. The Multimedia PC also takes advantage of the Microsoft® WindowsTM operating system, making Multimedia PC software easy to access and integrate with other software applications on your PC.

The list of available or announced Multimedia PC software products already includes 230 titles and applications from 95 software companies. You can recognize these products by the MPC logo above. Multimedia PC titles

already include whole reference libraries brought to life with photos, drawings, animations, video and sound; language-instruction titles with spoken lessons and pronunciations; interactive childrens titles with engaging animations, and sounds; and tools to help you build your own multimedia creations.   Multimedia functionality is also migrating into business application programs, bringing multimedia capabilities to word processors, spreadsheets, and other popular productivity software.   The Multimedia PC brings CD-ROM into the mainstream of personal computing and greatly expands the types of software products available for your PC.

What is a Multimedia PC?

A Multimedia PC consists of five basic components: a PC, a CD-ROM drive, an audio board, Microsoft Windows 3.1 or Windows 3.0 with Multimedia Extensions 1.0, and a set of speakers or headphones for audio output.

The *minimum* PC configuration for a Multimedia PC is a machine with a 386SX processor and 2 megabytes of RAM, a 30 megabyte hard disk, and a VGA or VGA+ display (virtually all Multimedia PCs produced today exceed these minimum specifications).   To this base a CD-ROM drive has been added, to give the Multimedia PC its tremendous information retrieval capabilities.   The addition of an audio board and speakers or headphones gives the Multimedia PC its ability to play and manipulate speech, music, and other sounds.

High performance Multimedia PCs which meet or exceed the following specifications are known as Level 2 MPCs: 486SX processor, 4 megabytes of RAM, 160 megabyte hard disk, double-speed CD-ROM drive, and the capability of displaying 65,536 colors at 640 X 480 resolution.

A Multimedia PC which meets some but not all of the Level 2 specifications is considered an MPC Level 1 computer.

How do I get a Multimedia PC?

You may purchase a Multimedia PC as a pre-configured system or, if your current PC meets the system requirements as described in the MPC Specifications, you can easily upgrade to a MPC Level 1 or Level 2 Multimedia PC with the purchase of an upgrade kit.   In addition to upgrading your current machine, an upgrade kit may be used to configure a new system as an MPC.

Prices for full MPC systems start at under $1,500 and upgrade kits are available starting under $500. For information regarding companies shipping Level 1 and Level 2 certified MPC systems and upgrade kits, contact the Multimedia PC Marketing Council.

What is the meaning of the MPC logo on hardware?
The distinctive MPC or MPC2 logos certify compliance with the corresponding MPC Specification.   Products bearing these marks have passed tests to ensure that they meet the specification requirements.   Compliance with the specifications guarantees compatibility with multimedia PC software.

What are the benefits of Level 2 MPCs compared with Level 1?
Most applications will run faster on the enhanced MPC2 platform.   Software-based video will perform better on Level 2 Multimedia PCs.   Photo CD applications, not supported on base Level 1 MPCs, will also perform well on Level 2 machines.

Although Level 2 MPCs provide better overall performance, Level 1 MPCs will continue as viable multimedia machines well into the future.   (Most of the Level 1 MPC's being sold today meet a number of the Level 2 requirements).

Can I install the Multimedia PC upgrade kit myself?
Yes, upgrade kits are designed for installation by the user.   Upgrade installation requires opening your PC and inserting an audio board into one of the PCs expansion slots, as well as installing an internal, external, or portable CD-ROM drive and loading the necessary system software.

How many expansion slots does a Multimedia PC upgrade kit require?
A Multimedia PC upgrade kit requires one or two slots, depending on the kit manufacturer and whether you select

an internal or external CD-ROM drive.   A number of upgrade kits with external CD-ROM drives require two expansion slots in your computer.   Some upgrade kits offer an integrated audio board and internal CD-ROM drive that occupy only one expansion slot.

I already own a CD-ROM drive   can I use it with a Multimedia PC?
Yes, some upgrade kit manufacturers offer special packages that allow you to upgrade to a Multimedia PC without buying a new   CD-ROM drive.   However, CD-ROM drives come in a variety of performance levels, not all of which are sufficient for a Multimedia PC.   To be fully compatible with the Multimedia PC standard, the drive must have a transfer rate of at least 150 kB/second and a maximum seek time of 1 second, and utilize no more than forty percent of the computers CPU processing power (check the Specifications for Level 2 requirements).   This information should be included in the technical specifications for your drive.   If it is not, check with your drives manufacturer.   In addition, you need to be sure that you are using Microsoft MS-DOS® CD-ROM Extensions (MSCDEX) version 2.2 or later and an updated device driver for your CD-ROM drive.   The manufacturer of your CD-ROM drive can provide you with version 2.2 of MSCDEX and an appropriate driver.

I already have an audio board in my computer   can I use it with my Multimedia PC?
Some upgrade kit manufacturers offer special upgrade packages that allow you to use your current audio board. However, many popular audio boards are not fully Multimedia PC compatible.   Multimedia PC audio compliance for digitized sound is 8 bit samples at an 11 kHz input sampling rate and 8 bit samples at a 22 kHz output sampling rate (check the Specifications for Level 2 requirements).   Your audio board also requires a software driver from the audio board supplier to communicate with Windows.   You can obtain this driver from your audio board manufacturer.   The Multimedia PC also has audio mixing capabilities that enable it to output a variety of audio sources through a single output jack.   Most older audio boards do not have this mixing capability but can be enhanced with external audio mixers that can be purchased separately.   Check with your audio board manufacturer for more information.

How well will a pieced-together Multimedia PC work?
It might work very well.   However, to be absolutely certain that your system will be one hundred percent compatible with all Multimedia PC software, look for PCs and upgrade kits that bear the MPC logo.

Will ordinary speakers or headphones work with my Multimedia PC?
Yes, but you will need a power source to drive the speakers.   This can be a standard stereo amplifier (with an "audio-in" jack) or self-powered speakers, which can be plugged directly into the exposed audio-card socket in the back of your Multimedia PC.   Self-powered mini speakers, such as those used with personal stereos, are a popular alternative.   Headphones can be plugged directly into the audio card socket and do not require any external power source.

Minimum Multimedia PC Level 1 System Requirements

Hardware:
386SX or higher processor.
2 MB RAM.
30 MB hard disk.
VGA or VGA+ display.
Two button mouse.
101 key keyboard.

CD-ROM drive:
  CD-DA outputs, sustained 150 kB/sec transfer rate without consuming more than 40 percent of CPU bandwidth in the process.
  Average seek time of 1 second or less.
  MSCDEX 2.2 driver or equivalent that implements the extended audio APIs.
  Subchannel Q support (P, R-W optional).

Audio board:

8-bit DAC, Linear PCM sampling, 22.05 and 11.025 kHz rate, DMA/FIFO with interrupt.
8-bit ADC, Linear PCM sampling, 11.025 kHz rate, microphone level input.
Music synthesizer.
On-board analog audio mixing capabilities.

Serial port, parallel port.
MIDI I/O port.
Joystick port.
Headphones or speakers connected to your computer system.

System Software:
Binary compatibility with Windows 3.0 plus Multimedia Extensions or Windows 3.1.

Minimum Multimedia PC Level 2 System Requirements

Hardware:
25 MH 486SX or compatible microprocessor.
4 megabytes of RAM (8 megabytes recommended).
3.5" Floppy drive.
Hard drive (160 MB minimum).
Video display resolution of at least 640x480 with 65,536 (64K) colors.
Two button mouse.
101 key Keyboard (or functional equivalent).

CD-ROM Drive:
    Doublespeed with CD-DA outputs (Capable of   sustained 300 KB/sec transfer rate).
    No more than 40% of the CPU bandwidth may be consumed when maintaining a sustained transfer rate of 150 KB/sec.
    Average seek time of 400 milliseconds or less.
    10,000 hours MTBF.
    CD-ROM XA ready (mode 1 capable, mode 2 form 1 capable, mode 2 form 2 capable).
    Multisession capable.
    MSCDEX 2.2 driver or equivalent that implements the extended audio APIs.
    Subchannel Q support (P, R-W optional).

Audio board:
    16-bit DAC, Linear PCM sampling, 44.1, 22.05, and 11.025 kHz rate, DMA/FIFO buffered transfer capability.
    16 bit ADC, Linear PCM sampling, 44.1, 22.05, and 11.025 kHz rate, DMA/FIFO buffered transfer capability; microphone input.
    Music synthesizer.
    On-board analog audio mixing capabilities.
    CD-ROM XA audio capability is recommended.
    Support for the IMA adopted ADPCM software algorithm is recommended.

Serial port.
Parallel port.
MIDI I/O port.
Joystick port.
Headphones or speakers connected to your computer system.

System Software:
Binary compatibility with Windows 3.0 plus Multimedia Extensions or Windows 3.1.

The following chart compares key requirements and recommendations of the Multimedia PC Level 1 and Level 2 Specifications.   Complete information about the specifications is available from the Multimedia PC Marketing Council.

Minimum Requirements:	MPC Multimedia PC Level 1	MPC2 Multimedia PC Level 2
RAM	2 MB	4 MB
Processor	16 Mhz 386SX	25 Mhz 486SX
Hard Drive	30 MB	160 MB
CD-ROM Drive	150 KB/sec. sustained transfer rate, maximum average seek time 1 second	300 KB/sec. sustained transfer rate, maximum average seek time 400 milliseconds, CD-ROM XA ready, multisession capable
Sound	8-bit digital sound, 8 note synthesizer, MIDI playback	16-bit digital sound, 8 note synthesizer, MIDI playback
Video Display	640 x 480, 16 colors	640 x 480, 65,536 colors
Ports	MIDI I/O, joystick	MIDI I/O, joystick

Recommendations:		
RAM		8 MB
CD-ROM	64 KB on-board buffer	64 KB on-board buffer
Sound		CD-ROM XA audio ability, support for IMA adopted ADPCM algorithm
Video	640 x 480, 256 colors	Delivery of 1.2 megapixels/sec. given 40% of CPU bandwidth

Please note that the above requirements are minimum system requirements and not a recommendation by the Multimedia PC Marketing Council for a particular system configuration.

The New Kid on the Block, the first *Brøderbund Living Book*™ of poetry, is based on hilarious poems by the award-winning author Jack Prelutsky.   Children 6 to 12 select words or lines and watch with delight while animated cartoons act out the selections, accompanied by sound effects, music and narration (Prelutsky himself reads four poems).

Reading skills grow through word recognition.   Since the children are in control, they can proceed at their own pace.   Words, phrases, and lines can be highlighted individually; the computer then reads them aloud and animations convey their meaning.   The program also includes an illustrated book containing all poems in the program.

Features:

. 17 of Jack Prelutsky's best poems read and fully animated.

. Children spend hours memorizing the poems   learning hundreds of words in the process.

. Children have poems read all the way through or stop on each verse to explore the picture by clicking on words.

. Simple interface for young children ages 6-12.

. Includes original story book.

The Tortoise and the Hare, a *Brøderbund Living Book*™, is based on a 2,500-year-old fable by the legendary Greek writer Aesop.   This interactive, animated storybook includes dozens of hilarious new twists, with lively animations, music, sound effects, narration, and talking characters.   So the story is fresh, enchanting, and full of surprises!

Clicking on various parts of the screen, children 3 to 8 explore words as well as pictures.   Since the children are in control, they can replay a favorite part, go back or skip ahead as they proceed at their own pace.   With this whole-language approach, they soon learn to recognize words, letters and complete sentences.

Features:

- Dozens of "hot spots" start clever, delightful animations.

- Children are empowered to explore the screen at their own pace.

- Talking characters have personality: Meet Simon, who narrates and interacts with the story; the slow, clever tortoise; and the fast, excitable hare.

- Read-only and interactive modes are available.

- Originally developed storybook is included.

Peripheral Devices Supported:

- Sound Blaster™ or compatible, Sound Blaster Pro™.

Chapter 6.   Louis Armstrong

entertaining, is not to be dismissed artistically. It influenced Billie Holiday, Ella Fitzgerald, Bing Crosby, Frank Sinatra, and a host of others.

Video 6-1: Louis Armstrong sings and improvises on "Dinah" at a concert in Copenhagen, October 21, 1933, during his first European tour.

There were some clear highlights of the thirties, including the vocal choruses on "When You're Smiling" and "After You've Gone." Armstrong was singing with the same kind of improvisatory freedom with which he played, and his gruff, gravel-filled voice is charming in its own way. He could be a very moving singer, as he demonstrated on two choruses of "On The Sunny Side of the Street," recorded in Paris in 1934, that build heartbreakingly. (A comparison with the same song recorded at Symphony Hall, Boston in 1947 shows that this was something of a routine, but that does not diminish its power. In any case

HOUSE DESIGN   Categories of Houses

Historic Styles

Early National Period   Federal Style (1790-1850)

   Although a distinction in building materials
by region continued (wood still more
common in the north), outstanding examples
of the style in brick could be found in
Charleston, South Carolina and in Boston,
Massachusetts. As with the Georgian style,
examples built by less wealthy individuals or
in remote locations might feature only a
doorway ornamented on the exterior.

   ...the pressure for restraint dominated appeals
   for the adornment of private property, at least
   through the 1830's. In theory, in classless
   America, all dwellings would embody the same
   principles and would therefore look alike.

Leonardo da Vinci 1452-1519

Leonardo da Vinci was born in Vinci, in the Val d'Arno, below Florence, and is considered to be one of the greatest masters in the history of painting. He was a pupil of Andrea del Verrocchio. Leonardo has been well called a "universal genius." He was painter, sculptor, architect, and engineer. He had a thorough knowledge of anatomy, mathematics, astronomy, and botany, and also was a poet and musician. It was his greatest delight to study the growth of plant life, the

Alternating Current Generator

Armature

generator ▶ (jĕn′a-rā′tər), electrical device used to convert mechanical energy to electrical energy. It operates on the principle of electromagnetic INDUCTION. The generator moves a conductor through a magnetic field and directs the current produced by the induced voltage to an external circuit. In the simplest generator, the conductor is an open coil of wire rotating between the poles of a permanent magnet. During a single rotation, one side of the coil passes through the magnetic field first in one direction and then in the other, so that the induced current is alternating current (AC), moving first in one direction, then in the other. Each end of the coil is attached to a separate metal slip ring that rotates with the coil. Brushes resting on the slip ring pass the current to the external circuit. To obtain direct current (DC), i.e., current that flows in only one direction, a commutator is used in place of

COMPSOGNATHUS

Compsognathus was tiny, only as big as a large rooster. It was one of the smallest dinosaurs ever discovered—around two feet long from head to tail. Its small size doesn't mean that it was a gentle, quiet dinosaur, though. Compsognathus was a meat-eater that used its speed, claws, and sharp teeth to capture insects, lizards, and frogs, all of which shared the dinosaur world.

Bear

→ Polar Bear on an Ice Floe

Bear, any of seven genera of large mammals constituting the family Ursidae. Bears include the largest members of the order Carnivora and are closely related to pandas, raccoons, and dogs. They are distinguished from other carnivore families by having heavy bodies, a short tail and short, rounded ears, plantigrade feet (both heel and sole touching the ground, as in humans), and a hind foot with five toes. They also lack the shearing teeth common to most carnivores; the crushing molars of bears are believed to be an adaptation for a plant diet. Although bears are classified as carnivores, the different species vary widely in their feeding habits. For example, the polar bear feeds almost exclusively on seals and other animals, but may also graze on vegetation; the grizzly eats grasses, herbs, berries, and nuts as well as living or dead animals.

THE BASS GUITAR is lower in pitch than the electric guitar on which it is based. It was designed to provide double bass players with a portable, fretted instrument which could be amplified and easily played. The bass guitar has two important roles in a band: it plays bass notes to support the melody, and, along with the drums, it provides a rhythmic pulse that drives the band along.

Mozart's World
Escape to Vienna

Outside the city walls were estates such as the Belvedere, whose property was acquired by Prince Eugene in 1693. Between 1700 and 1725 he installed lavish gardens, a summer home (the lower Belvedere), and a reception hall (the upper Belvedere). The three-quarters of a mile north to the inner city was essentially a flat, open plain. ▶

Stravinsky's World

Creative Life

Stravinsky was the first major composer to record large quantities of his own music. Photographs and videotapes of him on the conductor's podium show a frail body transmitting powerful jolts of energy through his baton. Just how much of his recordings Stravinsky actually conducted is debated; some believe that Robert Craft frequently led the Columbia Symphony Orchestra when the tape machines were actually running.

Be on top of it all with Multicom's new infotainment (information and entertainment) title about satellite observation of the earth.   *Terra* is a double feature.   In the first CD, the Satellite Control System allows the user to learn about the operational satellite program; or choose the System Functions to watch and observe.   Visualize the beauty from the rise of the earth, watch hurricane "Andrew" wield its power over Florida, and see the dark clouds hovering, once again, over Kuwait.

The second CD gives insight into the "life of a planet."   An image is used to represent each day, from the last five years.   The Video Retrieval System, within seconds and minutes, shows the whole database of five years   with the simple click of a button.   Once the desired day is picked, a range of specific image processing functions (zoom, palette operations, grey scale ranging) can be performed.   These functions help to understand meteorological basics and are fun to apply!

The images themselves pose a challenge for creative image processing, and are as original as the satellite "sees" it, originating from the archives of the ESA (European Space Agency).

The dual CD comes in triple language version (English, French, German).

SHAKESPEARE, William (1564-1616)

Shakespeare, the English dramatist and poet, is
considered largely as the most gifted literary figure
of all times. The son of a glover and leather merchant,
Shakespeare was baptized in Holy Trinity Church in
1564, and probably attended Stratford grammar
school. He acted and wrote plays for the London
theaters for years. His two narrative poems, Venus
and Adonis and The Rape of Lucrece, were published
between 1593 and 1594. Collection of his plays, which was known as the First
Folio, was published in 1623 by John Heminge and Henry Condell. He was widely
admired for his dramatic techniques of depicting his characters webbed in
psychological complexity. His plays were greatly appreciated during the early
17th century.

JOAN COLLINS

"When you've got a good thing, why change it?"

To her fans, Joan Collins is *Dynasty*'s Alexis Carrington, the embodiment of romance and femininity at their beautiful best. To her friends, she's a hardworking actress, businesswoman, and mother. She's also involved in a very private relationship with the man of her dreams, and with the recent publication of *Love and Desire and Hate*, she's a successful novelist. Since there's not much time left in her life for cooking, Joan relies on a few standby recipes -old favorites- that are both delicious and easy to prepare.

List Price: $4,995.00

IconAuthor is an intuitive, comprehensive multimedia authoring tool, ideally suited for developing interactive multimedia commercial titles on the MPC under Windows™.
Its powerful, intuitive "visual programming" environment is unrivaled for building lively titles that include high-level text, graphics, animation, CD-quality audio, and full-motion video   all without scripting.   Title developers simply choose from a library of icons to build the structure of an application, then add content through dialog boxes.

IconAuthor separates an application's content (i.e., the text files, graphic files, animation, video, and audio segments) from its structure, supporting a team development approach that is required for rapid, cross-platform title creation. This separation enhances simultaneous development, version control, quality assurance, maintenance, consistency, and the development of title series. Developers can reuse the original structure and simply modify content when creating additional titles in a series, thereby significantly reducing development time.

Features:

. More than one application can be opened at the same time with full abilities to copy and paste between them.

. Supports Rich Text Format (RTF) files allowing you to import text from leading word processing applications; also supports ASCII files.

. Supports multiple active objects in one screen, and multiple actions for each object.

Apollo: The Beginning

CD Controls

Current Position: 00:00:00

When the crew of Apollo 11 splashed down in the Pacific Ocean on July 24, 1969, Americans hailed the successful completion of the most audacious and complex technological undertaking of the 20th century: landing humans on the moon and returning them safely to Earth. Just over eight years before, when **President John F. Kennedy** proposed the manned lunar landing as the focus of the United States' space program, only one American – Lt. Comdr. Alan B. Shepard, Jr. – had been into space, on a suborbital lob shot lasting 15

Photography The Basics: Time & Light

Lens & Focal Length

Focal length is another important aspect in the the aperture/shutter speed equation. Focal length, affects image size, angle of vision, and focusing distance. Focal length, as a simple rule, refers loosely to the field of vision (angle) of the human eye. A 50 mm lens is considered normal, in that it encompasses the area normally seen by a person looking straight ahead.

35mm

Focal Length

As focal length increases, the angle of view becomes narrower, the depth of field becomes shallower, and the image in focus becomes larger. In a 100mm, or telephoto lens the subject appears larger, or closer than at 50mm. A telephoto is an excellent lens for wildlife photography, because it allows you to remain at a distance, while filling the frame with that rare song bird you hope to identify. A 35mm, or wide-angle lens, makes the subject appear smaller and more distant than a normal lens. It is the lens to take with you when visiting the Grand Canyon, as it will take in the panoramic, dramatic views that make Canyon the wonder
