

## **Organize your Computer the Same Way You Organize Your Office**

Step up to a new way to work in Windows. You bought a computer to get better organized and to make your life easier. Windows, you thought, would make managing your computer a snap. But then you had to deal with things like directories, subdirectories, and program files. And this was supposed to make your life easier? Introducing Third Dimension...the only Windows desktop that organizes your work the way you've been doing it for years. Third Dimension replaces the rigid program groups of Windows with an easier to use object-oriented desktop design that you can customize. Choose filing cabinets, file drawers, or even file folders, whatever is most familiar to you. And filenames are no longer limited to 8 characters. You can name your files what you want, serious or whimsical, words or numbers, without having to work within the boundaries of DOS.

Finally, you can control Windows.

With Third Dimension, gone is the distinction between data and applications. Now you can combine different files into one folder. For instance, your budget folder may include a spreadsheet, a word processor file, and a presentation. In Third Dimension, all you do is point and click and all of the files (and programs) are loaded instantly. It's that simple! Now, you can control the programs, the programs don't control you. Third Dimension moves programs and their rigid file structure to the background so that you can focus on the task at hand--getting work done. You'll find working with Third Dimension makes your computer far more logical and better yet, enjoyable. In the beginning there was DOS, then came Windows, welcome to... Third Dimension, The Power of Windows, as Easy as a Mac.
