

## PhotoMorph 2 Demo CD-ROM

©1995 Andover Advanced Technologies, Inc.  
For more information call 800-274-9674 or 508-392-1362.

This CD-ROM contains: A demo version of PhotoMorph 2, several video clips that were created with PhotoMorph 2, two sample images to aid in in-store demonstrations, and the latest version of Microsoft Video for Windows (1.1d).

First, be sure that Video for Windows is installed on your computer. If it is not, run the SETUP program found in the \VFW11D directory.

One way to play the sample videos is to use the Media Player found in the Accessories Group. Once Media Player is open, use the Open command from the File menu to load the .AVI files found in the \VIDEO directory. Once the desired AVI is loaded, Press Play.

### The videos on the CD are as follows:

PM2DEMO.AVI	Short video highlighting the major features of PhotoMorph 2. This video was created entirely with PhotoMorph 2.
SOS.AVI	Music video created entirely with PhotoMorph 2.
FACES3.AVI	Impressive morph sequence of faces.
FRUIT.AVI	Full size morph sequence of fruit.
COKE.AVI	Commercial and advertising example of simple morphing.
HOUSES.AVI	Application of PhotoMorph in real estate presentations.
BREAKFAST.AVI	Short animated sequence featuring Morphman. PhotoMorph was used to provide the transitions, special effects, and all of Morphman's movement.

Note: the two AVI's in the \PM2LTD directory are for use in the project files that illustrate PhotoMorph's dynamic video effects. These AVI's were not created with PhotoMorph.

A demo version of PhotoMorph resides in the \PM2LTD directory. See its README.WRI file for information on using the demo to preview more special effects, and to learn how to use PhotoMorph to make your own morphs. You can also use the AVI player in PhotoMorph for AVI playback. Refer to the on-line help in PhotoMorph 2 for details.

Finally, in the images directory, there are two images to aid in in-store morphing demonstrations. They are stored in the .BMP format.
