  - 5 Star rating on Tucows
  - Wugnet Shareware Hall of Fame
  - PC World Editors Pick Award
  - Several other Industry awards and 5 Star ratings.
- More than 15 million downloads to date.
- An advanced registry cleaner for Windows that can safely clean, repair and optimize your registry in a few simple mouse clicks! Allowing you to easily fix problems with the Windows registry that are a common cause of crashes, slow performance and error messages.

Key features of Registry Mechanic 5.0:

- ***Safely repair invalid entries in your Windows Registry:*** Over time, invalid entries and orphaned shortcuts can accumulate in the registry as a result of uninstalling or incorrectly removing software from your system, having missing or corrupt hardware or software drivers, or deleting files referenced by shortcuts. Registry Mechanic can safely clean and repair invalid entries from your registry with a few simple mouse clicks.

- ***Improve system performance and stability:*** Registry Mechanic's ability to streamline your Windows Registry and remove orphaned references can significantly improve your system's stability and performance.

- ***Fast and secure scanning algorithms:*** Registry Mechanic incorporates secure scanning algorithms, which target crucial areas of your Windows Registry, enabling a fast and efficient scan.

- ***Scans your hard drive for invalid and incorrect program shortcuts:*** Registry Mechanic can scan for invalid and incorrect shortcuts in customizable locations on your PC.

- ***Automatically creates Windows Registry backups with each repair, with the option to restore them:*** Registry Mechanic automatically creates a backup of all changes it makes to the registry, allowing these changes to be restored to their original condition at a later time. On Windows XP operating systems, Registry Mechanic also allows the creation of Windows System Restore points prior to implementing repair changes, as an additional backup measure.

- ***Conduct an automatic scan at Windows startup, for continued system optimization:*** Registry Mechanic can be set to conduct a background scan each time you start up your PC. The Repair function can also be set to run automatically at the end of a scan, thereby allowing you to continue using your system without the need to interact with Registry Mechanic.

- ***Other customizable features, including:***
1. An Ignore List, allowing you to designate items you do not want to be repaired and detected in subsequent scans. Items can be added directly to the list or from the results of a scan.
2. The creation of informative, user-friendly logs, listing details of items found and memory resources available on your system.
