The incompatibilities with the CD-ROM/DVD-Drive NEC DV 5700A were fixed. This patch also includes all functions of the former patches (V 1.1. patch - MP-patch):

- GameSpy support. With this it is possible to start multiplayer battles comfortably via the internet. The Sudden Strike support within GameSpy is not activated, yet.
- Selective unloading of troops from trucks. When a truck is selected the units inside it are displayed in the upper left of the screen. You can now unload specific units by clicking on their symbol.
- Placing mines. This was simplified. Now you have to select a soldier carrying a mine. Then you choose "lay mine" and right click where you want him to place the mine.
- Repairing bridges. This too has been simplified. Select a supply truck. Select "repair bridge" and then right-click on the bridge.
