PANDA ANTIVIRUS PRO 5.0 WINDOWS 95

TABLE OF CONTENTS

1. INTRODUCTION

Panda Anti-Virus for WINDOWS 95 is specifically designed to work
with the new Microsoft Windows 95 operating system. Panda Anti-Virus
is a powerful 32 bit system that protects you against computer viruses
on the WINDOWS 95 platform.

The following describes the most important features of Panda Anti-Virus
as well as the installation procedure.

2. DETECTION AND REMOVAL

Thanks to a sophisticated scanning system, Panda Anti-Virus can scan
any system in a few seconds, detecting more than 9000 viruses, scanning
even inside compressed files. It scans memory, the boot
system, disk drives, directories and files. It can scan and disinfect the
new types of Windows 95 files, with long file names and Unicode characters.

3. LOG OF OPERATIONS

The result of all tasks performed is logged into a file that can be
browsed with the Anti-Virus itself or with any ASCII word processor.

4. REPORT OF VIRUSES DETECTED

One of the program options consists of displaying an abbreviated list
of the viruses that can be detected and gives detailed information on
each of them together with its characteristics and the type of infection
they cause.

5. UPDATE SERVICE

The update service,for users that have purchased an update subscription,
allows the user to keep the virus protection up to date so as to be able
to detect the most recent viruses. This service can be contracted by phone,
letter or e-mail.

6. CUSTOMER SERVICE

Panda not only offers an Anti-Virus with the latest technology and
professional features, but it also offers an Anti-Virus Hotline manned with
real experts in this field that have already solved thousands of user
problems, and that will be able to advise you on any doubts you may have

on the issue of virus related security.

7. NEW VIRUS EMERGENCY TEAM.

In addition to free technical support to handle any virus-related problem
you experience, subscribers also have an emergency team of specialists
standing by to respond to any new virus that is encountered. In many cases
a custom cure will be made available in as quickly as 48 hours.

8. INSTALLATION

- Insert the Panda Anti-Virus for WINDOWS 95 diskette into the drive
  (A: or B:).

- Run the SETUP.EXE program on the diskette, selecting the "Run"
  command in the Windows 95 Start menu. Check the Windows 95
  documentation or help system if you are unsure on how to do this.

- By default the program will be installed into C:\PAVW95. You can change
  the target directory for installation when asked for it.

- The program files will then be copied to the target directory.

- Once the installation is completed the program can be accessed opening
  the Start menu, selecting there the "Programs" folder and then the
  "Panda AntiVirus for Windows95 folder".

9. UN-INSTALL

To un-install the program, select the Control Panel from the Settings
folder in the Start menu and select "Add/Remove Programs". A list with
all the un-installable programs will be displayed and amongst them
"Panda Anti-Virus for Windows/95". Select this option with the mouse
and click on the "Remove" button. The program will be un-installed in a
few seconds.
