{bmc DateTime.bmp} **TDateTimeDlg Component**

See Also Properties

Unit
DateTime

Description
My aim for this component is to end the need for any Delphi developer to have to write another date / time selection utility.

The TDateTimeDlg can be configured to select dates, times or date/times. To find out more, see the Buttons Property

All buttons in this control can be customised: See the BtnUpGlyph Property, BtnDownGlyph Property, BtnClockGlyph Property and BtnCalendarGlyph Property for details.

The user can either edit the date/time value in the edit box, depending on the value of the EnableEditor Property

The up and down buttons (if selected) allow the user to increase or decrease the date/time value. The amount that the date/time value is changed, is set by the IncrementBy and IncrementScale properties

The About property provides details about the copyright, the version, and the author. For these details, see About TDateTimeDlg

Other Key Features
The user can change the IncrementBy and IncrementScale values by right clicking the mouse over the up or down buttons.

In addition to these properties, methods, and events, this component also has the properties, methods, and events that apply to the Edit Control.

The author is available for employment. For details, see About TDateTimeDlg
