Product Orientation Guide

Product Overview

☒ The Apple® Macintosh® Classic® personal computer offers the key Macintosh benefits--powerful technology that's easy to use, access to thousands of applications that work well together, built-in networking, and a smooth growth path--at a very affordable price. The all-in-one, integrated design of the Macintosh Classic makes it an excellent choice for people who need a trans-portable system that's easy to set up and easy to move. As Apple's most affordable system, the Macintosh Classic brings Macintosh technology within reach of more customers than ever before.

☒ The Macintosh Classic is a fully functional Macintosh with many built-in capa-bilities not always found in other personal computers. An updated version of Apple's most popular Macintosh design, the Macintosh Classic runs applica-tions up to 25 percent faster than the Macintosh Plus and can easily handle word processing, spreadsheet analysis, and a wide variety of other home, education, and business tasks. What's more, with 2 megabytes of RAM and an optional internal 40-megabyte hard disk, the Macintosh Classic will be able to take advantage of new applications and System Software Version 7.0.

☒ The Macintosh Classic includes an 8-megahertz 68000 microprocessor, the Apple SuperDriveˢ floppy disk drive (for reading from and writing to Macintosh, MS-DOS, OS/2, and ProDOS® floppy disks), and six built-in ports that support the AppleTalk® network system as well as a variety of popular peripherals.
