

ExtendedCharacterMap Help

Welcome to ExtendedCharacter Help. There are many responses to this small program and I'm very glad that this program widely used and very useful for you. Enjoy using this new updated version.

Extended Character Map is just like Windows Character Map with a bigger sample display for the selected character. This program also displays the keystroke code for the selected character. If you want to copy a single or more than one character to the clipboard, you can double-click a character and the character will be added to the 'Characters to Copy' edit box. Now, characters in character map can be resized.

New in this version:

- Little interface improvements
- Little code improvements

Hello world.... I want a notebook computer. Can you give me one? Really need it for mobile programming activities. Many thanks to people that have been downloading and using ExtendedCharacterMap, any suggestions? Please send me comments, suggestions or critics so I know where my software goes. I collect every e-mail from people around the world.
