HS CleanDisk SE

System, memory and disk optimizer for Windows 95/98/NT/ME/2000/XP

Special edition

(c)2000-2004 (Yenicag Bilisim Ltd)

For new versions and new software take a look at

 <http://www.haysoft.com>

 info@haysoft.com

Windows system optimizer which cleans hard-disk and system registry, optimizes memory, tunes-up system specific settings and uninstalls software no longer wanted.

It supports Windows 95/98/NT/ME/2000/XP. It automatically detects the system and dynamically organizes itself accordingly. It is all in one package.

MAINTENANCE

- * Cleans drives from files left aside and unused.
- * Cleans system registry from uninstalled software junks
- * Safe uninstall of selected software from your system.

SPEED

- * Cleans computer memory from unnecessary data enabling your programs run faster

PERFORMANCE

- * Cleans internet cookies, caches
- * Increases system performance

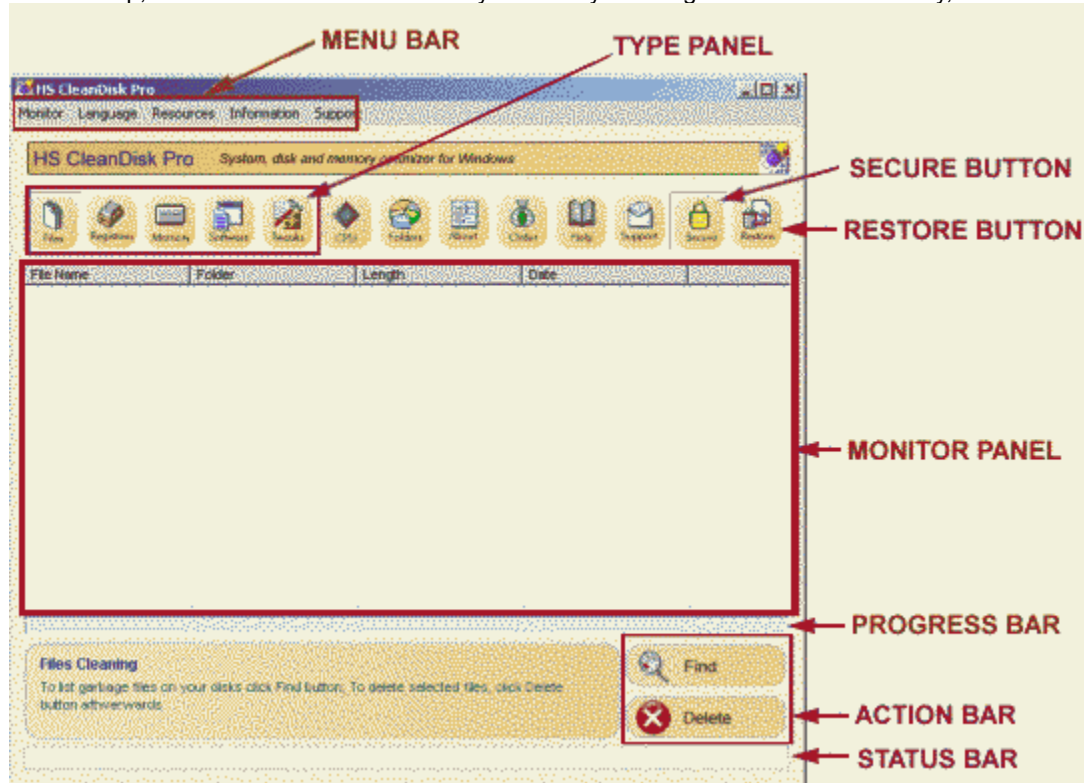

OPTIMIZATION

- * Auto-detects low memory in the system and boosts performance by refreshing memory space.
- * Auto-runs at start-up, and surveys your system.
- * Increases free disk space

INFORMATION

- * Shows Graphical System Information (CPU/Drives/Memory)
- * Shows graphical pie chart representation of folder usage and accessing all subfolders information via mouse click.
- * Shows free memory space above taskbar in specified intervals.

After startup, HS CleanDisk SE runs silently in the tray. Clicking on  icon on the tray, will restore it to the desktop.

HS CleanDisk SE supports following cleaning options. From **TYPE PANEL** choose a clean type and follow instructions mentioned in the links below.

TYPE PANEL

[Files Cleaning](#)

[Registry Cleaning](#)

[Memory Cleaning](#)

[Software Removal](#)

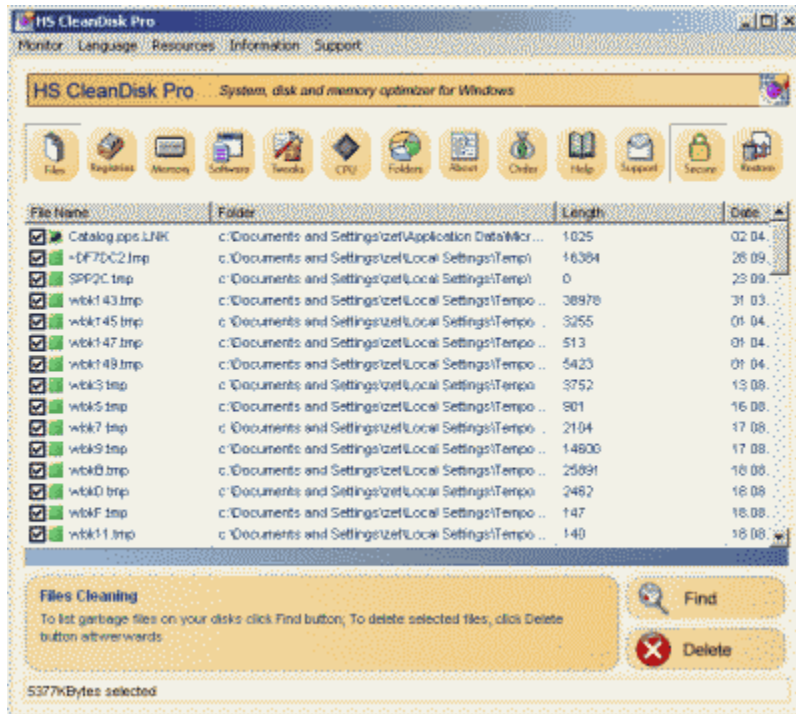

The software also offers a group of advanced system specific tasks related to optimization of the whole system.

From the **ACTION PANEL** you may choose:

- * **FIND** to find entries or files to be cleaned. They will be displayed on **MONITOR PANEL**
- * **DELETE** to delete selected entries displayed on **MONITOR PANEL**
- * **FIND** to list installed software. They will be displayed on **MONITOR PANEL**
- * **DELETE** to uninstall selected software displayed on **MONITOR PANEL**
- * **REGAIN** to reclaim memory used by dead processes.

If selected, **SECURE BUTTON** on **TOOLBAR** will provide deleted items to be backed-up. If needed (in almost rare cases), it is possible to restore files/entries deleted by clicking on **RESTORE BUTTON**

Also from **TOOLBAR**, you can find links to our support page, support team address, help , folder, memory, cpu, and disk statistics.

- Pressing **FIND** button will find any garbage data located in a selected drive. All items are selected as default. The data to be found are redundant files or data remained after uninstallation or deletion of the various software from your system.

- If **FILES** BUTTON is selected then the data to be found will be files,
- If **REGISTRIES** BUTTON is selected then the data to be found will be registry items in windows system registry.

- Pressing **DELETE** button will delete all selected items shown in the middle panel.

- Backup feature can be used if you are not sure about deleted files, please make **SECURE** BUTTON on before you do any modification. Then, you may click on **RESTORE** BUTTON to restore files from backup. They are ended with (.bck) extension for files (.reg) extension for registries.

Keep in mind that **RESTORE** BUTTON is available and specific for certain **TOOLBAR** BUTTONS, you must click on related **BUTTON** before clicking on **RESTORE** BUTTON.

(i.e for files cleaning restoration, click on **FILES** BUTTON first then click on **RESTORE**)

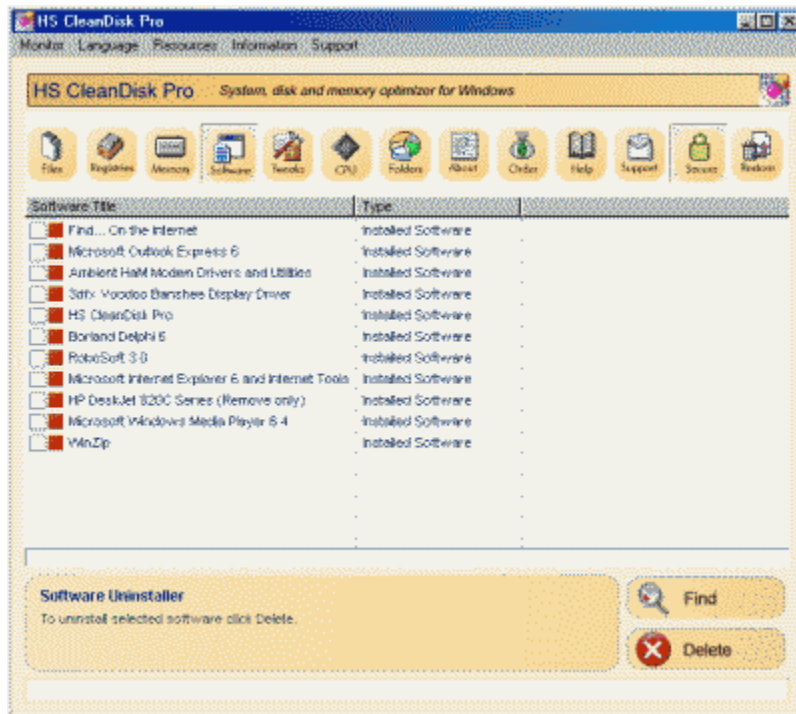

Pressing **REGAIN** button will

- recovers memory leaks generated by applications actively executed on the system and by the system itself.
- defragments RAM so that your applications will run faster and the system boosts its performance.

You do not have to press **REGAIN** everytime your memory goes low, HS CleanDisk SE runs in the background keeping your system in good condition.

Checking 'Show Memory Alerts' in the options, will enable HS CleanDisk to display free memory every 2 minutes in the tray.

With HS CleanDisk SE, it is possible to uninstall software no longer wanted from your system. Sometimes, because of the system registry corruption, software which no longer available on the disk, can be listed on **Control panel / Add/Remove Software** list. These and some remaining entries must be removed by the system.

Pressing **FIND** button will list software installed on the system. Choosing one or more software no longer wanted and then pressing **DELETE**, will launch associated software removal tools. After removal of the selected software, if any of these tools are not able to remove the junk entries mentioned above, HS CleanDisk SE removes these unused entries from your system making system in good shape.

*It has reached 90.000 downloads in CNET Download.com and 20.000 downloads in German Chip Magazine (as June 2002)
