

Welcome to BBEdit 4.0.2!

This installer supplies all of the components you need to update an existing installation of BBEdit 4.0 or 4.0.1 to version 4.0.2.

The "Easy Install" selection will update your BBEdit 4.0 or 4.0.1 application to version 4.0.2, update the installed HTML authoring tools to version 2.1.1, and install version 3.0.1 of the "FTP" extension, necessary to support the new "Open from FTP Server" and "Save to FTP Server" commands.

If you have difficulty updating your BBEdit application, drag a fresh copy of the BBEdit 4.0 application from your BBEdit CD-ROM to your working BBEdit folder, restart your machine with the Shift key held down to disable extensions, and try running the updater again. The BBEdit application file may be found inside the "BBEdit 4.0" folder, which is in turn inside the "BBEdit 4.0 Files" folder on the CD-ROM.

Please note that this update cannot be applied to a demo, freeware, or beta (pre-release) version of BBEdit, nor can it be used to update an older commercial version of BBEdit. If you are currently using BBEdit Lite, or BBEdit 2.5, 3.0, 3.1, or 3.5, please contact Bare Bones Software for upgrade options and pricing:
