

EDIT MENU

UNDO

Reverts the current picture to the previous picture. Works only on graphics.

CUT/COPY/PASTE/CLEAR

Standard Macintosh editing options which perform the selected choice on either text or graphics depending on which tool is in use. This will not attempt to cut, copy, or paste a picture if the text tool is in use and will not cut, copy, or paste text while a graphics tool is in use.

SELECT ALL

Selects all text when the text tool is in use. Graphics are always selected when a graphics tool is in use, so this has no effect on graphics.

SHOW CLIPBOARD

Opens a window that displays the contents of the clipboard. Displays text and graphics only. If anything other than text or graphics is on the clipboard (such as sounds), the window will be empty.
