

About Me (Paul Caswell).

I am a Mac programmer with 15 years programming experience since my BSc (Hons) in Computer Science about 10 of which were on the Mac. I have recently had to put my career on hold for a few years to look after my children and am therefore unemployable due to school hours limitations. I have a Mac development system kindly loaned to me by a large local Mac dealer.

Between writing software for my friendly Mac dealer and teaching I.T. and Pascal(Yukk) at my local College I spend much of my time trying to think of and sometimes writing applications and utilities that seem to me to be of potential use.

I have written a cute core application in C++ using CodeWarrior with plug-and-play modules designed in at ground level which helps me produce running code extremely fast.

I have never professed to be an ideas man in terms of new products but once an idea takes fire I am almost unstoppable. If the result is worthwhile and the implementation enjoyable I will often complete an alpha version in an amazingly short time. Some of the utilities I have written have been at final stage within a day.

I would welcome any suggestions readers might have. If they take my fancy and produce a workable result I would be happy to provide complete, supported code, perhaps even in source form for commercial use if required for a very small fee as long as the work is enjoyable. All good suggestions will be attributed fairly to its source if the result is effective and ShareWearable.

I can be contacted by SnailMail at:

41 Bramwoods Rd,
Chelmsford,
Essex CM2 7LS.

I would be happy to release my 'phone number to those who write with interesting or worthwhile suggestions.

I look forward to your letters and shareware fees.
