Japan goes digital

Japan's first digital TV package started on JCSAT 3 (128\textdegree{)E) today, initially offering a bundle of 60 TV and radio channels. Future plans call for an increase to 170 channels.

More than 35,000 decoders for the service called PerfectTV have already been sold,. Perfect TV Corporation said it expects 300,000 subscribers by the end of the year and over a million within the next three years. The price for the reception equipment (decoder and satellite dish) reportedly is about 50,000 (US\$450.)

The company recently doubled its capital to $\yen50$ billion (US\$455 million) by issuing new shares to a total of 28 companies, 23 of them new investors such as Toyota Motor, Sony and Nippon Telegraph and Telephone Corp.

The next digital venture is already close at hand. Rupert Murdoch will launch his JSkyB service next June, co-operating with the domestic software wholesaler Softbank Corp. while at the same time buying 21.4 percent of the Japanese Asahi TV network. Other companies have announced digital satellite TV services as well.

<http://www.perfecttv.co.jp/> (all Japanese)

<http://www.asahi.co.jp/abcHomeE.html> (Asahi's English pages. Nice

cooking recipes and always the "Newest Information from the Himawari V. [weather] Satellite.")

1.6 prem

premiere breaks even

Germany's one and only analogue pay-TV channel premiere has announced it will break even this year following a 30 percent surge in revenues. Next year, profits are expected to surpass the DM10-million mark even though further investments of some DM100 million are planned.

Recently, premiere recorded more than 100,000 new subscribers within a period of six weeks. It is of course by no means unusual that such services attract many subscribers during the Christmas season. And even though premiere's subscriber base now is at an all-time high of 1.4 million, it still is just a negligible percentage of Germany's 32.7 million TV households.

1.7 spy

Openness -- without telling secrets

For the first time, the USA today officially announced the launch of a spy satellite. The National Reconnaissance Office (NRO,) which is in charge of spy satellite operations, has acknowledged that a Titan IV booster rocket will lift off from Vandenberg Air Force Base with a reconnaissance spacecraft on board next Friday. The launch window will be open between 11:30 A.M. EST (1630 UTC) and 1:00 P.M. EST (1800 UTC).

And that was all the Office, which by the way was top secret itself until 1992, was prepared to say. Except that those satellite launches weren't really secret, of course, because the blast-off of any rocket was unlikely to go unnoticed. Usually, the U.S. Air Force wouldn't comment on those unannounced launches "on the grounds of national security," so that everybody could be sure it was indeed a spy satellite that went up. So, nothing new really, expect for the fact that those interested in satellite launches will now know one day earlier that they will be told nothing.

1.8 sex-1

British government considers sex harmful

Once again, the British government has effectively banned a hard-core satellite TV channel. French Rendez-Vous Télévision, broadcasting on EUTELSAT II-F3 (16\textdegree{E}) at 10.987 GHz h, may no longer sell viewing cards in

Britain.

Speaking at the Tory Party conference in Bournemouth, National Heritage Secretary Virginia Bottomley today declared she would "not tolerate gratuitous violence and filth on television." Rendez-Vous is the third

porn-channel banned in the UK, following similar measures against Red Hot TV in 1993 and TV Erotica in 1995.

The opposition Labour Party obviously does not object to the government's move. Their shadow national heritage secretary Dr Jack Cunningham pledged a Labour government would tackle pornography on TV. "A Labour government will definitely act to prevent it."

Rendez-Vous' Roger Kingsbourg accused the government of treating TV viewers like children, pointing out that "We do not show unnatural situations and we have a strict policy of only showing adult sex. And we are not in the business of broadcasting programmes to minors."

British viewers will be able to use their current smart cards until they expire. After that, there will certainly be other ways of getting hold of one - it will probably just cost a bit more. In addition to that, Britain has no legal means to ban unscrambled trailers broadcast by Rendez-Vous and other porn channels. Usually, these 15-minute trailers are shown before the scrambled programmes start.

1.9 md-tv

Search warrant against Med-TV

One again, Kurdish Med TV disappeared yesterday -- this time from its new transponder on INTELSAT 705 (18\textdegree{W}). The last time the channel vanished it did so because of uplink problems. This time, the nature of the interruption seems to be of a more severe nature.

As MSAT satellite's Dr. Dish reported today, police and tax office agencies searched the station's headquarters in Denderleeuw/Belgium on Wednesday.

MED-TV is accused of maintaining connections with the Kurdish PKK and of acting as a money-laundry to clean up drug-traffickers money.

During a similar raid last year, BFr350 million (US\$10 million) were found. The station, which utilises a British satellite TV license to reach its audience, is said to be financed mainly by Kurdish businessmen living in Belgium. Nothing is known about the future of MED-TV at this time.

1.10 express

EKSPRESS 6 at 80\textdegree{E}

Thanks to Hornedo Rodriguez Gonzalez, Marketing Manager of Intersputnik, here are some details on the latest EKSPRESS satellite launched on September 26.

"Intersputnik, the Moscow based International Organisation of Space Communications, has been authorised by Russian Space Organisations to operate the main capacity of EKSPRESS 6.

"EKSPRESS is a new generation of satellites designed to replace the GORIZONT satellites. The payload consists of twelve active transponders: One C-band (6/4 GHz) transponder of 40 MHz, nine C-band (6/4 GHz) transponders of 36 MHz and two Ku-band (14/11GHz) transponders of 36 MHz. The maximum EIRP of C-band transponders will be in the range of 38.0-48.0 dBW and for Ku-band 42.0 dBW.

"EKSPRESS 6 will be deployed at 80\textdegree{E} to replace GORIZONT 24. It will ensure

coverage of the Eastern European continent, Northern Africa, Middle East, Eurasia, the Indian subcontinent and South Eastern Asia. As soon as in-orbit tests are over and the satellite becomes operational later this year, Intersputnik will start reconnecting its existing and new clients to EKSPRESS 6 according to received booking requests." Interestingly, NASA has recently given the name of the satellite as "EKSPRESS 12," so don't get confused. Anyway, EKSPRESS 6 (NORAD number: 24435) is already geostationary at 80\textdegree{}E, according to NORAD data from October 8.

1.11 digi-prob-1

Good bye, digital TV

Digital television in Germany is over before it had really begun. Today, two of the major players announced independently to abandon their current plans for digital TV packages.

Media company Bertelsmann said it has put its digital TV project Club RTL on halt while at the same time considering to leave the Multimedia Betriebsgesellschaft (MMBG.) This alliance of telecommunications companies and broadcasters already suffered a heavy blow last Monday when Deutsche Telekom declared it would leave the consortium and offer its own conditional access system instead (Sat-ND, 16.9.96.)

Bertelsmann board member Thomas Middelhoff called the prospects of digital TV "hopelessly overestimated," adding that his company won't spend billions of Marks that can't be earned back before ten year's time. Club RTL may still be launched, but not as planned before at end of the year. According to Middelhoff, Bertelsmann will wait until the market is ready for another digital package to compete with Leo Kirch's DF1.

Other companies seem to have come to the conclusion that the German market with its dozens of free channels will never be ready for pay-TV on a broad basis. Pro Sieben, ranging number three of the most popular (free) channels, has entirely sacked its seven-channel package which was due to be launched on November, 16. "After thoroughly examining the market, we came to the conclusion that there's no business for us here," admitted Georg Kofler, director of the board. He said the company would still continue its plans to offer digital transmissions for business and corporate TV.

Ironically, Pro Sieben is not a member of the ill-fated MMBG but instead of the Kirch family's media empire. As such, it had planned to use Kirch's d-box for its package. Insiders already claim Kirch is thankful for every decoder he does not sell in Germany as the boxes are heavily subsidised.

1.12 digi-prob-2

Digital problems in USA

Even in the USA, where digital TV seems to develop more successful, first doubts have surfaced. Continental Cablevision Inc. may sell its stake in Primestar Partners, a cable operator-backed direct broadcast satellite venture.

Continental president/CEO William Schleyer isn't at all sure that Direct Satellite Broadcasting "is a great business going forward." Referring to the latest reductions in set-top box prices and special offers, he added "These guys are killing each other with price. So, what kind of business is it going forward?"

1.13 ariane-1

SKYNET stays with Arianespace

Arianespace will launch the military SKYNET 4F for the British Ministry of Defence. A contract signed today by Arianespace and the satellite's constructor, Matra Marconi Space, calls for a lift in the second half of 1999.

Skynet 4F is the last in a series of six British military communications satellites. Built by Matra Marconi Space in the United Kingdom, it will weigh approximately 1,500 kg (3,300 lb.) at launch and will offer 1.5 kW of power. Design life is seven years. SKYNET 4F will provide government communications links for various land, sea and airborne terminals.

Following the launch of SKYNET 4B (53°E) in December 1988 and SKYNET 4 ←
C

(1°W) in August 1990, Arianespace plans to launch Skynet 4E and 4F in ←
1998

and 1999, respectively.

It is the third launch booked by Matra Marconi this year following similar turnkey contracts with Singapore Telecom/Chunghwa Telecom (Taiwan) and the Egyptian Radio and Television (ERTU.)

With this launch contract, the 17th of the Year, Arianespace now has 42 satellites on order to be launched.

Arianespace is the world leader in the provision of commercial space transportation services. Matra Marconi Space is a joint venture between Lagardere Groupe SA of France and General Electric PLC of the UK.

1.14 ariane-2

Ariane sets up satellite bank (well, kind of)

In case you have a satellite but no money to get it up where you want it, you might as well go ask Arianespace for a credit. It doesn't quite work out that way, but a newly created Luxembourg-based subsidiary, Arianespace Finance, will provide up to US\$400 million in loans to Arianespace customers, allowing simultaneous financing for eight to ten customers. Financing will be provided for three to ten years after the satellite launch.

Arianespace today said in a press release that "the loans are principally for customers who do not yet have access to bank financing because their projects are new and because they wish to finance their projects based on revenues generated by the satellite.

"These loans will be refinanced by a group of banks led by Credit Lyonnais (France), The Chase Manhattan Bank (USA), Kreditanstalt für Wiederaufbau (Germany) and ING Lease and Structured Finance (The Netherlands). These

banks will also assume a portion of the risk after launch." [What risk? -- Ed.]

1.15 inmarsat-1

Another INMARSAT launched

An Atlas IIA rocket this morning successfully launched the third of the new-generation Inmarsat mobile communications satellites into geosynchronous transfer orbit from Cape Canaveral Air Station. Inmarsat-3 F3 follows the successful launches of F1 and F2 aboard an Atlas from Cape Canaveral in April and the Russian Proton from Baikonur in September. It was the 27th consecutive successful Atlas launch from CCAS and the seventh and final Atlas launch of 1996.

Inmarsat-3 F3 was built by Lockheed Martin, which is responsible for overall spacecraft design, manufacturing, assembly and testing. Matra Marconi Space provided the communications payload onboard the satellite. Once in final orbit, Inmarsat-3 F3 will provide global mobile communications services on land, at sea and in the air. It will extend the availability of the Inmarsat-phone service to almost all of the world's land areas.

The Atlas IIA is one of four variants in the Atlas family presently launching satellites for domestic and international customers. The Atlas II series, consisting of the II, IIA and IIAS, has compiled a perfect record with 100 percent mission success of each configuration starting with the Atlas II introduction in 1991, the Atlas IIA in 1992 and the Atlas IIAS in 1993. The Atlas family is capable of launching satellites weighing from 2,268 to 3,696 kg (5,000 to 8,150 lbs). The new Atlas IIAR, which will begin launching in 1998, expands that performance capability to 4,037 kg (8,900 lbs).

1.16 welcome

You may wanna ask. "What in THE hell is MSAT". ?

MSAT GUIDE is for all Amiga users who also (luve) satellite television.

You will find a new MSAT.***.Guide (***) = month) every month.

Where you can read about:

- * Latest Rumors
- * News
- * Latest Ariane Launches
- * Updated satellite listing froms Europe and South & North America

But read on and i hope you enjoy my work sofare. If you like this guide then please send me some mail (e-mail or snail mail you will find me

addresses in Support) and let me know what you think of MSAT.GUIDE so that i can improve on it.

MSAT Editor.

MSAT SUPPORT

How can you help me with next issue of MSAT GUIDE. ?

I'am trying to setup MSAT-TEAMS around the world that can help me with future editions of msat guide that means.

- Write a rapport of the changes the last month to be included in upcoming "montly" guides.
- Edit satellit listings in your zone.

So i'am looking for MSAT-TEAM in the following zones around the world.

- North America (USA)
 - California
 - New York
 - Texas
- South America (Brazil or Argentina)
- Japan
- Australia

So if you are intrested in joining me then pleas contact me via e-mail or use my snail mail addresse.

To ALL MSAT Readers who D O not contribut in ANY way!!

Hope you do like what you are reading so far. ??

If you do like my work then i hope you can send me (any of the following):

- * Postcard from where you live (just to findout where my readers/users are.

* CASH, just keep those Kr,dollars,pund coming.

1.20 editor

Editorial MSAT ISSUE 2

Welcome to ISSUE 3 of MSAT GUIDE.

Finally your favourit satellite guide is BACK after your EDITOR (ME) have taken a well deserved rest!!.

But now i'am back.

There has been alot (thank god) going on in the world of satellite television and our favourite launcher "Ariane Espace" have got it's cargo where we all want it, in space.

Sky Television or as they are know over her BSKYB have launched 14 new channels or they have started 3-4 you can thank Granada television for the rest. :-)

In Germany Kirch has started "DF1" :) yes it's that same name as our external disk drive but this is that name of the didgital paqage. So this is one of the digital services that has started for our german friends.

Canal + (france) has also started it's digital service. The british satellite magazine " had a review of the D-BOX they will use and as the bris said - " when digital televison crashes it does that in a BIG way"

No i will leavy you for now, but will be back with a new guide in feb/mar 97.

- * To those of you who will not miss any MSAT SATLLITE GUIDE pleas read Support. I have now a service for those of you who will want to subscribe to MSAT GUIDE.

EVERYONE WHO READS THIS GUIDE PLEAS READ "MSAT SUPPORT"

--->> Jan-Tore Eliassen Thank you very much for
helping me out with MSAT.ICON.

--->> Mark Peacock Thanks alot for sending this gigantic North america
satellite list, thanks alot.

This is how those clewer chaps at SES want to build the 19.2\textdegree{} position ←

But you don't understand much of this. ?
Let me help you out a bit.

ASTRA 1A will use 11.20-11.45 ghz and backup for 1a is on 1B 11.45 - 11.70
under stand litle bit more now. ?

Problems e-mail me.

Hughes Communications DirectTV / Hubbard Broadcasting USSB (DSS)

Hughes Communications DBS-1
 101.2 degrees West longitude
 NORAD: 22930
 Satellite Type: Three-axis stabilized
 Launched December 18, 1993 (Ariane)
 Inclination: .0069 degrees
 16 transponders - 120 watts each

Hughes Communications DBS-2
 100.8 degrees West longitude
 NORAD: 23192
 Satellite Type: Three-axis stabilized
 Launched August 3, 1994 (Ariane)
 Inclination: .0079 degrees
 16 transponders - 120 watts each

Hughes Communications DBS-3
 100.8 degrees West longitude
 NORAD: 23598
 Satellite Type: Three-axis stabilized

Launched June 10, 1995 (Ariane)
 Inclination: .0036 degrees
 16 transponders - 120 watts each

DirecTV uses transponders 1,2,3,4,5,6,7,8,9,10,11,12,13,14,15,
 16,17,18,19,20,21,22,23,25,27,29, and 31

USSB uses transponders 24,26,28,30, and 32

Here is the latest channel lineup I've seen posted on the computer networks.
 All services are delivered by video compression.

1.75 galaxy-4-ku

Hughes Communications Galaxy 4 - Ku-Band

99 degrees West longitude

NORAD: 22694

Satellite Type: Three-axis stabilized

Launched: June 24, 1993 (Ariane)

Inclination: .0091 degrees

Transponder Power: 24 transponders - 50 watts each

Tr.	Uplink Freq in MHz	Downlink Freq in MHz	Block IF Freq

T24 (H)	14470	12170	1420

Half-Transponder Note: Vertically polarized transponders are theoretically the only transponders that can be made into half transponders. The downlink frequencies above are center frequencies for a full transponder. To get the approximate lower half transponder downlink frequency, subtract 13.5 MHz from the center full transponder frequency. To get the approximate upper half transponder downlink frequency, add 13.5 MHz to the center full transponder frequency.

Cross-strapping: C-band transponders 18 and 24 can cross-strap to Ku-band transponders 17 and 23.

Hughes Communications Galaxy 7 - C-band

91 degrees West longitude

NORAD: 22205

Satellite Type: Three-axis stabilized

Launched: October 15, 1992 (Ariane)

Inclination: .0164 degrees

Transponder Power: 24 transponders - 16 watts each

Tr.	Uplink Freq in MHz	Downlink Freq in MHz	Block IF Freq	Channel Readout

1.87 satcom-1

1.88 satcom-1-ku

GE Americom Satcom SN2 - Ku-Band

69 degrees West longitude

NORAD: 15385

Satellite Type: Three-axis stabilized

Launched: November 10, 1984 (Ariane)

Inclination: .0231 degrees

Transponder Power: 6 transponders - 16 watts each

Tr.	Uplink Freq in MHz	Downlink Freq in MHz	Block IF Freq
T19 (H)	14040	11740	990
T20 (H)	14120	11820	1070
T21 (H)	14200	11900	1150
T22 (H)	14280	11980	1230
T23 (H)	14360	12060	1310
T24 (H)	14440	12140	1390

Half-Transponder Note: The downlink frequencies above are center

frequencies for a full transponder. To get the approximate lower half transponder downlink frequency, subtract 18 MHz from the center full transponder frequency. To get the approximate upper half transponder downlink frequency, add 18 MHz to the center full transponder frequency.

Half-Transponder Note: The downlink frequencies above are already half transponder frequencies.

Note: This is an incomplete list of services on Anik E1 Ku-band based on contributions. My location is too far south to receive the majority of the channels on this satellite, so contributions are always welcome.

Note: Transponders 1-8 are National Beams. 9-16 are Western Beams. 17-20 are National Beams. 21-32 are Eastern Beams.
