## **Security Information**

This program comes without any warranty. If you use it, it's on your risk.

Barcode 97 has a built-in module that checks the integrity of itself. If an unauthorized change is detected, the program will not run. If the program is running then it is **not** infected by a virus! (This detection may fail if some of the executable code has been changed. Normally this would lead to a program or system crash.)
