

The **award-winning** professional
Web publishing tool that's as
powerful as **your Macintosh**

GoLive CyberStudio **3**

Professional Edition

The industrial-strength solution for dynamic Web site design

This one, intuitive program includes everything you need to design, produce and maintain fully-dynamic Web sites.

GoLive CyberStudio 3 is the first Web authoring tool to let you visually control and edit Cascading Style Sheets in WYSIWYG mode. Version 3 is also the only Web authoring software to create fully dynamic Web pages, without complex multimedia programming. At the same time, CyberStudio 3 offers new levels of control and flexibility for designing and laying out Web pages. And enhanced site management tools make Web site creation and maintenance easier than ever before. No other Web authoring solution gives you the power and productivity of GoLive CyberStudio 3.

Once you've tried GoLive CyberStudio, you're not going to want to design Web sites with anything other than our industrial-strength solution. For the name of the GoLive reseller nearest you or to purchase a copy of GoLive CyberStudio, visit www.golive.com or call 1-800-554-6638 Option 2 or 1-650-463-1580.

KEY FEATURES

- WYSIWYG Cascading Style Sheets
- Easy-to-Use Dynamic HTML
- Visual Layout and Design Control
- Advanced Site Management
- Visual Site Building
- HTML Native File Format
- Professional Source Code Editing
- Unprecedented Usability
- Dynamic Content Creation

GoLive CyberStudio 3 Professional Edition

“If you’re looking for the single best overall Web design program, we recommend GoLive CyberStudio.”

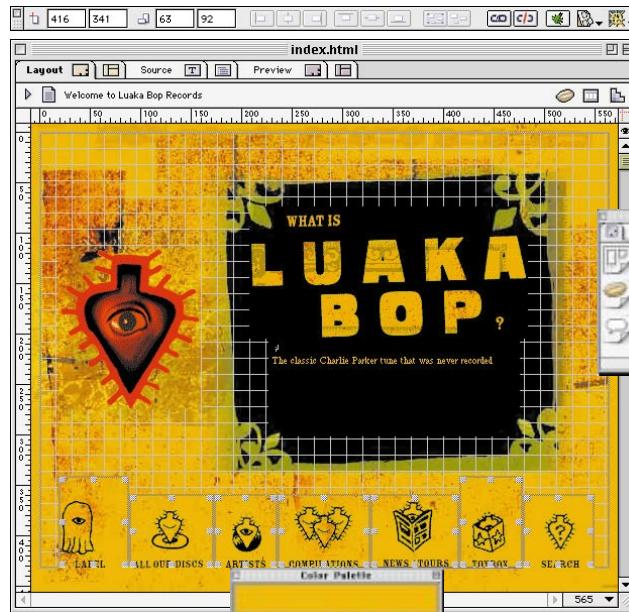

Macworld, May 1998

Page Layout Mode

Unlike novice Web authoring tools, GoLive CyberStudio lets you visually lay out Web pages using a grid and rulers—with pixel-level control—just as you would with professional page layout software.

Palettes

From one of GoLive CyberStudio’s palettes, simply drag & drop text, images, multimedia elements, JavaScript Actions, buttons, master components, lists, forms, header functions, frame sets, URLs, WebObjects tags—even your own favorite elements—onto your page.

Color Picker

Flexibly pick colors from one of GoLive CyberStudio’s eight different palettes—including Web-safe colors and your own site-specific color palette. You can even mix colors using either percentage or value.

Inspector

The context-sensitive Inspector window allows you to directly view, edit, or modify the parameters or attributes of elements of a Web site—such as QuickTime 3.0 movies—without opening a dialog box.

Floating Box Controller

Similar to other professional design tools, GoLive CyberStudio’s Floating Box Controller lets you make layers visible and invisible for precise editing when working with several different floating layer boxes.

Timeline Editor

Easily create DHTML animation with GoLive CyberStudio’s Timeline Editor. Unlike complicated key frame tools, the Timeline Editor makes creating animation a visual process.

Cascading Style Sheets

From GoLive CyberStudio’s Style sheet Window, you can easily view and control the entire set of properties in both internal and external style sheets.

The award-winning professional Web publish

Visual Design and Layout Control

GoLive CyberStudio provides design tools previously only found in professional page layout software. Precisely lay out Web pages using a grid. Drag & drop the latest multimedia files onto your Web page and watch them come to life. Group, align, and distribute objects on your page. Visually create and lay out tables. All the while, you precisely control the placement of objects—down to the pixel.

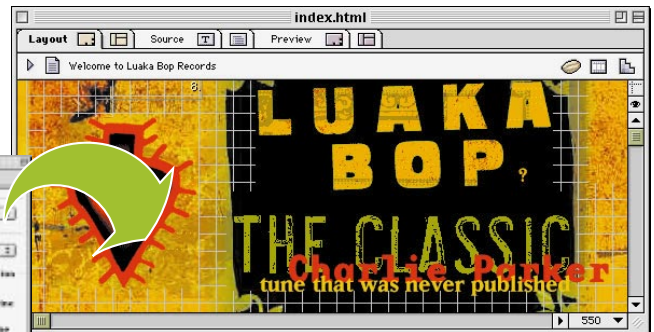

Master Components

With GoLive CyberStudio's Master Components, you can store any page component (such as navigation bars or logos) once, then easily insert and change these items throughout an entire site. Master components are stored in a single location then added to a page by reference, using CyberStudio's unique point & shoot tool. This makes it much easier to maintain and update large Web sites.

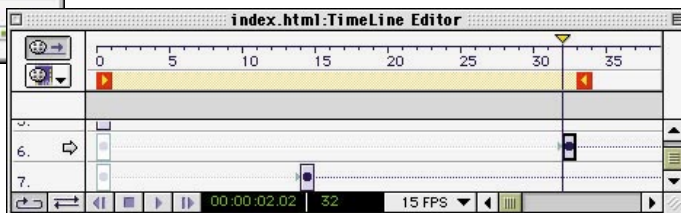

WYSWYG Cascading Style Sheets

Only GoLive CyberStudio allows you to create and edit cascading style sheets—seeing changes as they are made. You can precisely position and overlap floating layers on your Web pages. Create and edit both external, site-wide style sheets and styles specific to individual Web pages. Even select the layout mode to emulate different browsers. CyberStudio is the first program to put the full design power of Cascading Style Sheets directly into your hands.

Ready-to-Use JavaScript Actions

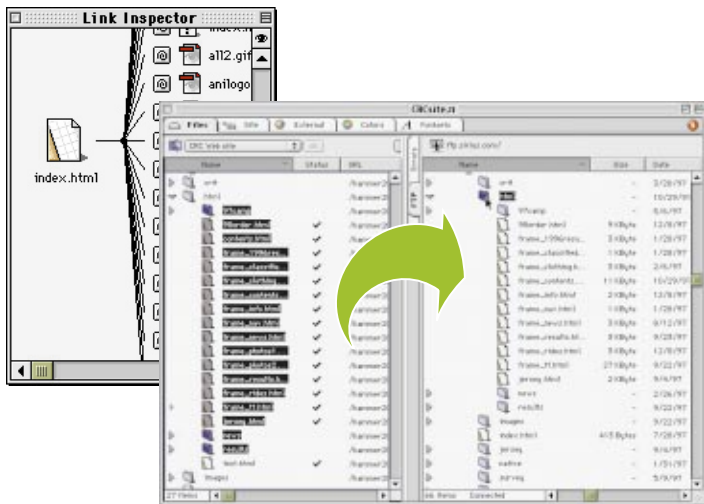

GoLive CyberStudio includes ready-to-use, fully editable JavaScript Actions, which are compatible with all major browsers. Creating buttons with mouse over interactivity has never been simpler. You can easily assign Actions—such as beginning an animation sequence—to trigger from any page element, such as a button, text selection, or image. You can even use an Action within the page header to automatically link to different pages based on a client's browser. In this way, Actions make creating interactive Web pages simple.

Easy-to-Use DHTML

Without requiring you to write code or learn complex multimedia tools, GoLive CyberStudio's Timeline Editor lets you fully animate and add interactivity to your Web pages. You'll quickly produce dynamic Web pages that work well on virtually every DHTML-capable browser.

ing tool that's as powerful as your Macintosh

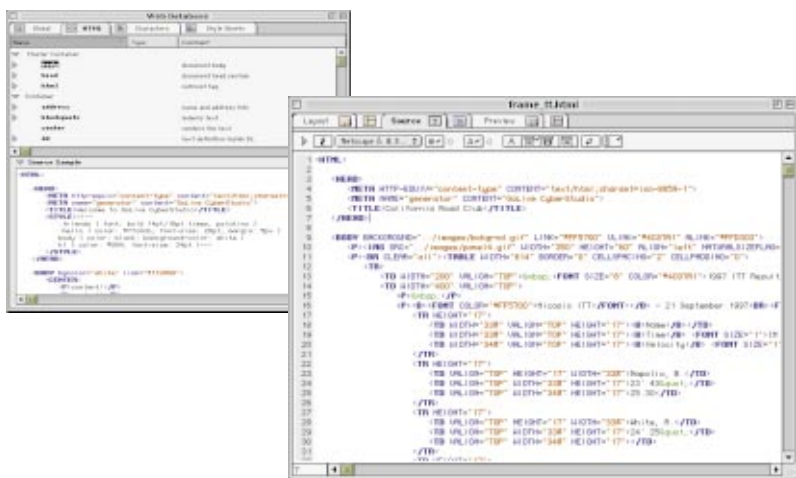

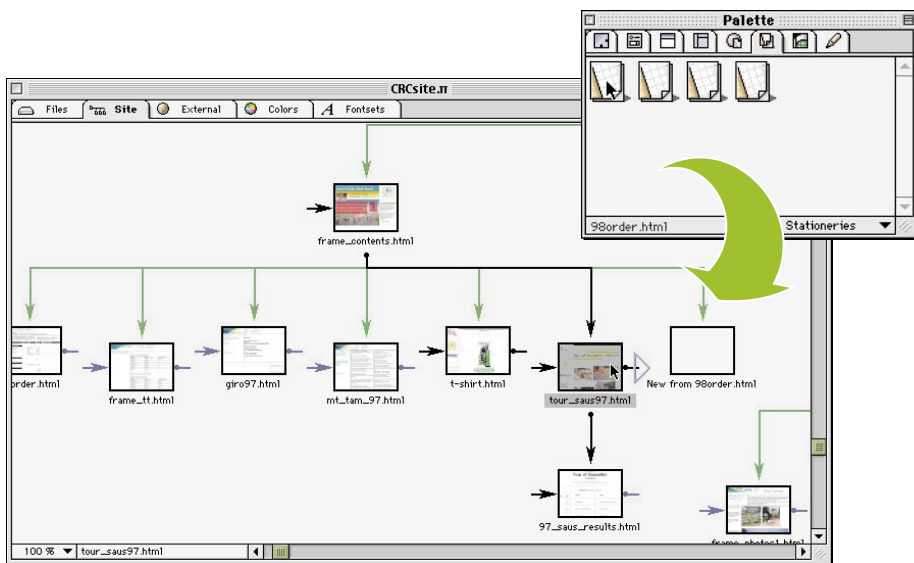

Advanced Site Management

With GoLive CyberStudio, you can efficiently manage all the assets and resources of large, sophisticated sites. CyberStudio will automatically add all elements to your Site Window, even showing which elements are currently in use within your site. It will also automatically check and update links when you move pages. You can easily drag & drop or point & shoot from the Site Window to create references to elements within your Web pages. Or connect directly to your Web server from within the Site Window via FTP, then drag & drop files to and from your server, as well as incrementally upload and download only those files changed. No other tool makes designing and managing a site easier and more productive.

Visual Site Building

Visually structure your site through GoLive CyberStudio's simple visual interface. Simply drag master and stationery pages from the palette onto your site diagram. Create entire sites from templates. Zoom in on areas of the site hierarchy. Navigate, change, and create links within a particular page. Alter page attributes. Add links. And fully control the formatting to flexibly print the entire Site View structure. In this way, CyberStudio both automates the process of building Web sites and gives you the highest levels of control over your site structure.

Professional Source Code Control

A powerful new Web database in GoLive CyberStudio gives you full control over your HTML tags and how they are formatted. It allows you to output source code just as if you hand coded it—satisfying even the most demanding Web programmer. You can also view and edit your HTML source code in GoLive CyberStudio's advanced source code editor. You can see line numbers within your HTML files. Switch between different source code color highlighting choices. Syntax check your HTML code for compatibility with particular browsers. You can even search and replace source code using powerful 'grep' style pattern-based searching and super-fast, index-based searching.

GoLive CyberStudio 3 Professional Edition

KEY FEATURES

 New Feature  Enhanced Feature

WYSIWYG Cascading Style Sheets

-  Create and edit internal and external style sheets
-  Create and control floating layers
-  Control the layout mode to match different browsers

Easy-to-Use Dynamic HTML

-  Easily control ready-to-use JavaScript Actions
-  Create and control animation with a Timeline Editor
-  Readily record sophisticated animation paths

Visual Layout and Design Control

-  Precisely place objects on pages, using a layout grid, boxes, and rulers
-  Select and group multiple objects
-  Automatically align and distribute objects
- Create, place and change master objects on pages throughout a site
- Play multimedia elements and Java applets while working in a WYSIWYG layout mode
-  Place and control QuickTime 3.0 media
-  Visually create and lay out tables
-  Import tab-delimited ASCII text into tables
-  Place, convert and resize images, including JPEG, GIF, and PNG formats
- Visually create and edit Web pages with frames
-  Create HTML 4.0 Web-based forms
- Easily create clickable image maps
- Drag ActiveX objects onto your page
- Place information directly in the HTML page header.
-  Select from a wide range of color palettes, including Web-safe colors
-  Pick colors by percentage or value
-  Simultaneously support multiple language character sets

Advanced Site Management and Visual Site Creation

-  Design, create, edit and view an entire site
-  Import existing sites
-  Work with multiple sites
-  Visually check and repair broken links
-  Automatically generate sites from templates and master pages
-  Spell check a single page or a complete site
-  Easily upload or download individual Web pages or an entire Web site via FTP
-  Incrementally upload and download Web pages
- Quickly open and edit HTML documents on a Web server
- Maintain sites with pages on multiple Web servers
- Display estimated download times for a Web page

HTML Native File Format

- Always work in an HTML native file format
- Share files with others—using any other HTML authoring tool or text editor—on any type of computer
- Read, write, and edit unrecognized tags

Professional Source Code Editing

-  View and write HTML source code
-  See the HTML backbone of a Web page in a clear-cut outline view
-  Automatically check HTML syntax
-  Color highlight different parts of your HTML source code
-  Check HTML syntax for compatibility with different browsers
-  Control the formatting of your HTML source code
-  Access a fully editable HTML Web database
-  Change page elements and styles individually or throughout an entire Web site using Find and Replace

-  Search and replace using 'grep' style pattern-based searching and super-fast, index-based searching
-  Switch quickly between layout and source code modes tracking individual page elements
-  Goto HTML lines by line number
- Write HTML code snippets
-  Create JavaScripts using the integrated JavaScript editor with color syntax checking

Unprecedented Usability

-  Quickly access functions from the context-sensitive toolbar
-  Collapse palettes and inspector windows to optimize desktop space
-  Create pop-up site and page windows for easy access
-  Download Web pages and all referenced elements via HTTP
- Save user-defined elements on a palette then easily drag & drop them onto your Web pages
-  Automatically save user-selected or defined colors for a site
-  Save user-defined font sets for a site
-  Retain and easily access HTML pages as stationery files
-  Modify a wide range of preference settings
-  Create pages with international text encoding support
-  Streamline the application using the Modules Manager
-  Undo many different operations throughout the application
-  Flexibly print different views

Dynamic Content Creation

-  Through connections to Apple's WebObjects 3.5, create dynamic Web sites that are fully integrated with existing corporate data and applications
