

I am a graphic designer: graduated last year: Have been doing freelance work since: Including all kinds of work from illustrations, paintings, drawings: cd covers, packaging, corporate identities, logos, magazine work, and much more: I am extremely passionate about what I do: I never stop: I am excessively obsessed with anything got to do with design. I am Proud to state the fact that I am too much of a keen, highly creative, ambitious and multi talented person, who is a natural allrounder. I pick up things very fast, due to my excessive and obsessional attitude towards the Design Industry. I not only teach myself on the latest graphic applications and use the computer all the time, I also have the natural ability to create my own images and concepts, in any medium. I can paint, draw and illustrate just about anything!.

At the moment I am teaching myself all about Web design and working on packages such as Dreamweaver: Flash: Fireworks:and many more. My goals and ambition are to carry on being so obsessional about the Design Industry and enjoy every minute of It!

1. Flash Tank: was created using different effects and textures using photoshop and painter 5. I just carried on adding layer after layer In photoshop and using small Images such as stones and pebbles created In Painter 5.

2. The world 2000 Is mine: was done using the same beads effect which were created In painter 5: the background was done In illustrator by just using any odd shapes and lines and then distorted by applying filter swirl/twirl In photoshop .

3. Haagan Daaz Dream: My Illustration of haagan daaz Icecream was created from scratch using just Illustrator for outlines and photoshop for filling the colours In and touching the whole Image up: the only thing that was scanned was the strawberry.

4.Wild Fantasy: This Is my all time favourite: I created It just using painter classic software. I used gems stones from the Image hose In painter : I drew and painted the flower by hand which I scanned and imported to the background Image: I added dfferent coloured lightng on parts of the Image to give It that unusual clarity and Interest.
