# SYSOP.WRI Local Access Logon Module

This file is intended for System Operators on bulletin boards and networks.
Please open README.WRI for user information.

## 1. The file LALOGnnn.ZIP

The unregistered version of Local Access Logon is dispatched under the filename LALOGnnn.ZIP, where "nnn" stands for the version number. Please remove older versions from your network as soon as a new one has been downloaded.

Future 32-bit versions (Chicago!) will be dispatched under the same naming convention.

You will not find a listing of all included files (whats the purpose?). The included Setup program will detect missing files, or won't work at all. Please contact me immediately in such a case, because somebody else might have distributed a modified version of LALOGnnn.ZIP.

## 2. Not for OS/2 and Windows NT

Many sysops test downloaded software on a number of platforms. Local Access Logon is not suited for other systems but Microsoft Windows (although parts of it run on Windows NT and have been developed on Windows NT), because of the very nature of it: logging on to Windows and provide access to Windows and DOS applications.

## 3. Copyright

All program files have been developed by and are copyrighted by Mart van Ineveld (M2w Software, The Netherlands), excluding the file CTL3D.DLL. The library CTL3D.DLL has been developed by a Microsoft Excel team, and may be freely distributed with other programs in order to add 3-D effects to dialogs (compatible with future Windows versions). The Setup program from LA will (of course) overwrite only older versions of CTL3D.DLL if one is already present.

By the way: the dispatched file LALOGnnn.ZIP was zipped with WinZip from Nico Mak.

## 4. Contact the author

In case of remarks, problems or questions don't hesitate to contact me:
