### 1.2 What it is

Grabby is a very simple screen grabber for screens displayed over a Retina graphic board.

Features:

- grab every 1-8 or 24 bit screen displayed over Retina
- save in IFF format

Restrictions:

- can not grab 16 bit screens
- can only save in IFF format
- must be started form shell

### 1.3 Requirements

Grabby requires at least AmigaOS2.0 and a Retina graphic board and its libraries.

---

## 1.4 Installation

Just copy the executable in your search path.

## 1.5 Usage

Just type "grabby filename [delay]" in a shell. "filename" is the name and path where Grabby will save the pic , "delay" is an optional delay in seconds Grabby will wait before doing its job. You can use this time to switch to another screen . Grabby will always grab the FrontScreen.

## 1.6 Copyright

This programm is Copyright 1995 by Thomas Lampart . I give permission for it to be FREELY distributed. No money need be paid to me (or anyone else) to use this package legally.

## 1.7 History

- V1.01 (02.02.95) initial release

## 1.8 To Do

Still many thinks to to:

- better screen selection,perhaps hotkey support
- add other save file formats
- GUI

## 1.9 Special Note

This programm uses a "PRIVATE" feature of RetinaWBemulation . So this could change in the future and Grabby wont work any longer. Of course an update will then be available ! :) But I dont think that there is a 100% legal way to grab a RetinaScreen .
