Fundamentals

Structured and Object-Oriented Analysis

Formal and Automated Techniques

Data Modeling

Data Objects, Attributes and Relationships

OOA concepts arose out of data-intensive analysis techniques (called *data modeling* or *information modeling*) that have been in existence for years (especially in database systems).

Recent uses of data modeling are seen in defining data formats for interchanging data between CAD systems, computers, and manufacturing organizations.

Some terms:

schema - data model used in databases

protocol - data model used in digital communications

framework - data models used to interchange data between CAD systems and manufacturing organizations

Data Objects, Attributes, and Relationships

Objects

have

Attributes

Naming attributes

Descriptive attributes

Referential attributes

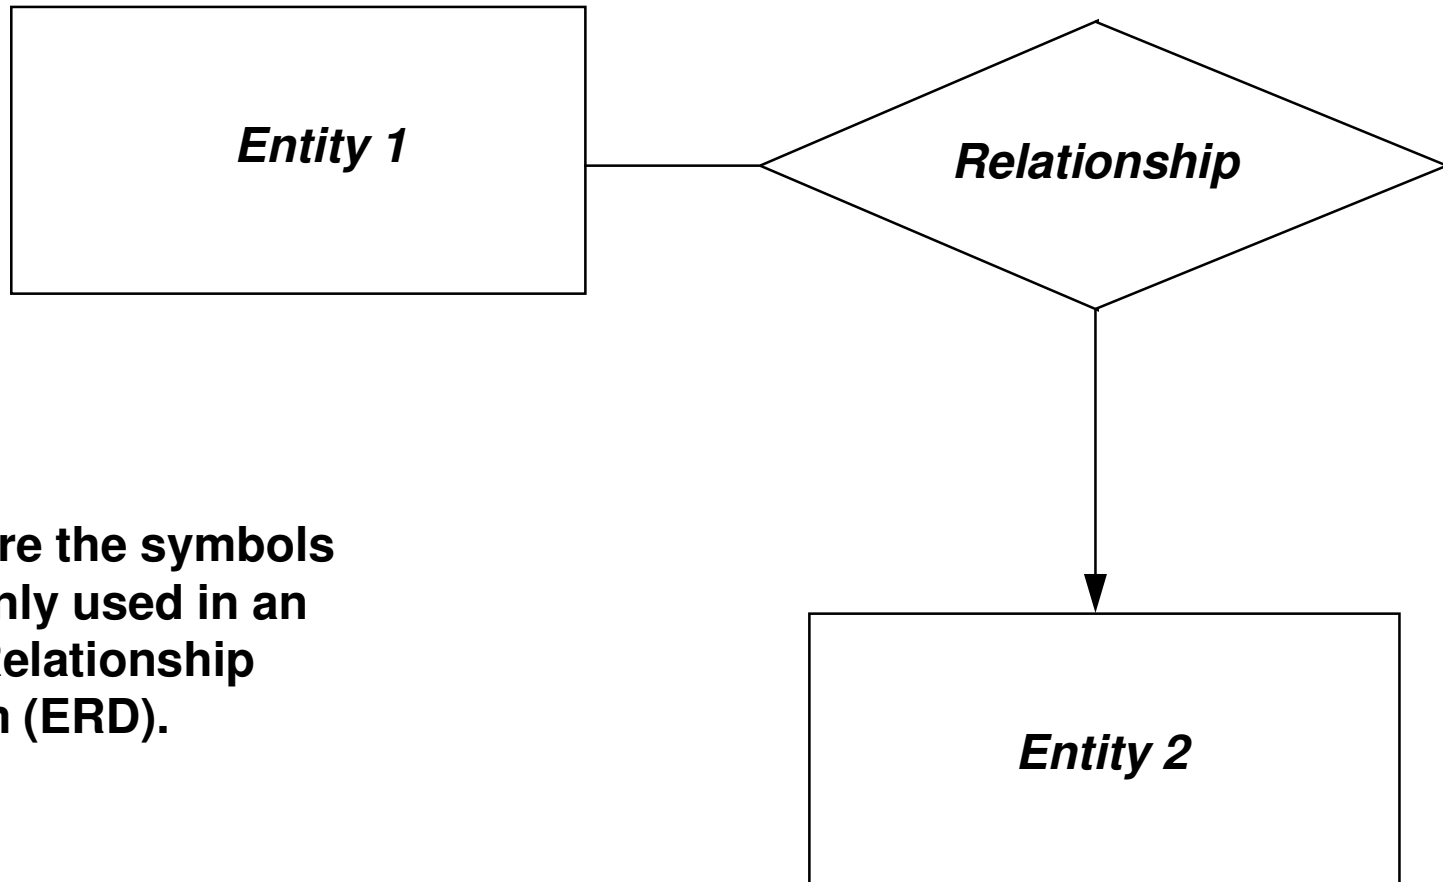

Objects

own

Objects

Data Modeling

Entity-Relationship Diagrams

These are the symbols commonly used in an Entity-Relationship Diagram (ERD).

Data Modeling, Continued

Entity-Relationship Diagrams - Example

Automated Tools

- **are often graphically-oriented**
- **may provide consistency checking**
- **support the development of the data dictionary**
- **usually support the development of DoD-STD-2167A documentation**
