1.2 Introduction

```
Introduction
~~~~~~~~~~~~
What does this little proggy do ?
Well, its just a little combination of IntuiSplit and IntuiJoin.
I wrote this as an addition to my former split & join programs.
```

1.3 Disclaimer

```
Disclaimer
~~~~~~~~~~
The program is completely Freeware, so do whatever you want with it, but

YOU ARE USING THIS PROGRAM ENTIRELY AT YOUR OWN RISK ! THE AUTHOR
CAN NOT BE MADE LIABLE FOR ANY HARM THIS SOFTWARE IS MAKING TO YOUR
SOFT- OR HARDWARE !
```

1.4 Requirements

```
Requirements
~~~~~~~~~~~~
You will need the following things to run the program:

- Kickstart 2.0 or newer (I think)

- A File to split (or files to join)
```

1.5 Installation

```
Installation
~~~~~~~~~~~~

Hmm, installation ???

Just copy the ISplitnJoin program to whereever you want it to be, for example
C:  SYS:Tools  SYS:Utilities  or something like that :)
```

1.6 Usage

```
How to use it
~~~~~~~~~~~~~

Partsize:
Only used when you split, otherwise ignored.
Here you type in the size (in bytes) of the fileparts. For example if you have
a file that is 35000 bytes big and want to split it in parts of 10000 bytes
each. type in 10000 in the Partsize, and you will have 3 files on 10000
and the last one on 5000 bytes.
By the way, the maximum size is 9999999999, but it should be sufficient :)

Empty row:
This just gives you some information of what the program is doing, right
this minute.

Select File:
```

Here you select the file you want to abuse :) A FileRequester will pop up.

Split:
Performs the actual splitting.

Join:
Joins files. To join files you must select a file that ends with ".0".
Otherwise it won't work.
