Chapter 1

RealTime

1.1 Contents:

```
                          RealTime Memory Watcher
        This Program and documentation is © 1997 Niklas Jonsson

                Inroduction

                Installation

                Using it

                Bugs, Todo

                Contact
                   This program is MailWare, which means if you can the you have  ←
                       to
     send a e-mail to me. Check out 'contact' for e-mail address.
```

1.2 Install rmw

```
                To Install RMW you only need to copy one of the executables to c ←
                      :
    and read the doc(this file)

                Back to main
```

1.3 Using rmw

```
                  Starting rmw is simple, just start it with 'run rmw' or from wb,
    by double clicking on it's symbole. After a short loading, there it is
    in all it's glory. The rmw window :) Quiting the program isn't too
    hard either, it's just quite unusual. As you will find, the programs
    window has no quit button and there's no menu's either, so how do u
    quit, well, first you have to find out which process the program
```

is, then just break it with the command 'break <process>'.

I know it's a unusual way, but I'll implent a menu in the program soon..

                    Back to main

1.4 Bugs and Todo list

                    I havn't found any bugs, but if u find one, please send me an e- ↩
                        mail
where u explain what happened and how I can make thu bug appear, also
send information about wich computer sort u have.

Information in
                Contact
                    .

These are some things I will implant in future versions

· Deside where the window will open via arguments

· A simple menu

· More information in the window, maybe displaying what time it is or
  something

Be welcome to send me suggestion what I should implent, get my address
in
                Contact
                    .

                    Back to main

1.5 Get in touch..

                    Send a e-mail on this address: niklas.jonsson@linkoping.mail. ↩
                        telia.com

                    Back to main

1.6 Information about what it is..

                    DISCLAIMER:

I will take no responsibilty whatsoever this orogram would cause!

What is RMW, well it's just another memory displayer, I made it because
I didn't got one myself, of course it isn't so advanced, but I think it's
alright. The strange name, comes from that in the beginning it showed
all memory changes, everey change even if only a byte dissaoered it would
show it, but the disadvantage was the speed, this version is 99 percent
faster than the first version.

Well that's what I wanted to say, so. . hope u like it. if not.. don't

Don't forget, this is mail-ware so if u try it, send me an e-mail.
