1.2 Introduction

There must be thousands of AppIcon trashcan programs around. It's amazing that there wasn't one for me.

I want a smart trashcan. If I throw away something from a partition with no trashcan (RAM disk for example) then I want it to go away. If there is a trashcan (like on my wife's partition) I want the junk to go to the trashcan directory. This is what EuroTrash does.

1.3 Distribution Info

EuroTrash is freeware. This means that you are allowed to copy and use it for free. It is not allowed to gain any profit by selling any part of this distribution in any form, except for Aminet CD's.

Any re-distribution has to include all files, as in the original archive, without modifications.

1.4 Disclaimer

By using this product, you accept the FULL responsibility for any damage or loss that might occur through its use or misuse. The developer can NOT be held responsible.

1.5 Requirements

You need at least OS 2.0 to run EuroTrash.

1.6 Installation

Use the included installer script to install EuroTrash. There is also a deinstaller script that you can use to remove EuroTrash from your system.

If you don't have the installer utility, just open a shell and do the following:

```
copy EuroTrash#? SYS:WBStartup
```

If you have OS 2.1 or higher do this as well:

```
copy Catalogs LOCALE: ALL
```

1.7 Program Usage

Drop drawers or files on the EuroTrash AppIcon to delete them. If there is a trashcan on the same volume as the dropped things, they will be moved to the trashcan instead.

1.8 Configuration

There are several tooltypes available for use in EuroTrash.info. These are:

- DONOTWAIT - Ignore this one.
- LEFTEDGE - Specify the X coordinate of where the AppIcon will appear.
- TOPEdge - Specify the Y coordinate of where the AppIcon will appear.
- ICONNAME - This is the text that will appear beneath the trashcan AppIcon.
- ICONFILE - Specify a trashcan icon which EuroTrash will use instead of its own. Leave out the ".info" extension.
- TRASHPATH - This is the path where EuroTrash will look for the trashcan. Address it relative to the current volume like this:
TRASHPATH=:trashcan
- ASK - Yes or no. If yes, a requester will ask politely before actually deleting anything. Moving to trashcan is always quiet though.

1.9 Author Information

EuroTrash 1.0 was written by Jonas Hultén and finished August 23 1997.
