Chapter 1

Windoze

1.1 Welcome to the Windoze 1.03 Guide!

Windoze 1.03

- **System Requirements** What you need
- **Installing** Install it
- **Usage** <--- WTF?
- **The Author** ME!

1.2 System Requirements

All you need to run Windoze is OS2+ and preferably large resolution. Depending on what Font you have in your settings, it might work or it might not. One thing I do know, if you have 640 width and have topaz 8, then it won't work :(Try getting another font.

1.3 Installing

Simply copy the drawer to wherever you like.

1.4 Usage

This program isn't really anything. It's just a program that makes fun out of Windows '95. All you do is run the program, and it will open a window in the center of your Workbench. It's set up with the \$100 flag which means it'll stay as a Backdrop window. Messages will come up every 6 seconds or so, and to quit it, simply activate the window, and go to the pop-up menus, and select Quit.

1.5 The Author

That's me, the author. My name's Alvaro Thompson, and I write pointless programs like this one. This was just a laugh, which I got the inspiration from a program called "Windoze" on the Acorns at school. Anyway, I hope you like it :)

This program is E-MailWare. If you use it (?) then you have to send me an E-Mail to me telling me whether you think it's a laugh or not: alvaro@enterprise.net

This program is part of the E-MailSoft Software group. Please visit our home page: <http://www.agima.demon.co.uk/emailsoft/>

Some of my other programs:

- MADS: A brilliant archiver / dearchiver program which supports 7 file types.
- DTInfo: Gives you information about Pictures through DataTypes.

In the making:

- Hang In There!: A cool Hang Man game, which uses the MagicWB Palette
- AmiSig: Make your very own ASCII signatures by simply typing it into a GTString

All the above programs can be found at the E-MailSoft site and Aminet.
