1.2   Project

Amistart is unique utility program in nice graphic environment
(126 colors in main screen). Amistart is program for all these
Amiga freaks out there that want to have nice boot picture, no
click,..., nice commodity programs in their WBStartup and so
on. With this program you can and will have all this and much
more. You can also read info about each program included in
English and Slovene language and install every program you
like with simple point and click procedure or (in cases of big
programs) unarchive program and then install it from
Workbench.

1.3   AMISTART

INSTALATION AND USAGE
Before you start the program, you must run installer provided
with this program. Then reboot computer and start the program
(click on the icon called AMISTART). Problem info :
miro.hacek@uni-lj.si

1.4 AMISTART

POSSIBLE PROBLEMS

Program runs on all AGA Amigas with 6Mb RAM (I think 4Mb
will also be enough). You will also need about 3Mb free space
on your hard drive. Tested on 020/28 and 030/50 with 4Mb
RAM. If program fails to run, please try xtra-libs (math libs; you
will find them in Amistart/Sys directory), but before you do that,
please backup your original libs.
