1.2 intro

Introduction.

WarpWB 2.0 is a powerful tool for system administrators, providing a comprehensive set of utilities for managing network devices. It is designed to be easy to use and highly configurable.

The software is available for Linux and Windows. It is a free software, licensed under the GNU GPL. The authors would like to thank all the users who have helped to improve the software.

For more information, please visit the project page at [http://warpwb.org](#).

1.3 req

Requirements.

- CPU 680MHz;
- RAM 2GB;
- MUI 3.x.

1.4 usage
