1.2 intro

USE AT YOUR OWN RISK

This Documentation should be able to answer most if not all of your questions about her installation and operation.

I go by Zonkerz, Majiik and have previously used Wolfecat as my nick.
I can be found on The Undernet on #starcafe / #AmIRC
or
on TalkCity in #connecticut_chat

Homepage of Shiela for updates is: <http://pages.cthome.net/amiga>
a link to my site can always be found on <http://www.starcafe.org>
in event that i decide to move my homepage.

NOTES

Shiela is not capable of handling more than 1 channel at a time.
Running 2 shielas in same channel is ...Chaos

INSTALLATION NOTES:

Just UnLHA shiela into your Amirc/rexx/ directory

how should this look?

```
amirc/rexx/  
amirc/rexx/cs/  
amirc/rexx/cscfg/
```

with the main cybershiela.amirx file residing in the amirc/rexx/ directory

load amirc, go online and type /rx cybershiela and away you go!

Its best to run shiela from a 2nd AmIRC program so that you can easily issue her ↔
commands.

Be sure to add user user@host mask to her masters.cfg file in amirc/rexx/cscfg/ ↔
masters.cfg

or you will not be able to issue Master level commands.

Read The AmIRC.Guide for information about user@host masking.

1.4 What is CyberShiela

WHAT IS CyberShiela?

She's an Amirc .amirx Rexx Script for Amiga computers Using Vapor's AmIRC 3.0+ IRC Client. Instead of Writing an Entire Bot, we've used Amirc as the base host for the bot. This is not just any old bot though. Most people call this an AnnoyScript (not far from the truth.) But....We call it CyberShiela. The bot with 24 hour PMS. This Bot is not for those faint of heart or under the age of 21.

Download and Use CyberShiela at your own risk. If you get Banned,K-Lined, G-Lined or what not from IRC servers, don't come blaming us. Shes a highly chaotic bot that terrorizes channels by yapping constantly, based upon the context of what is being spoken in the channel. This can get quite annoying. In All test so far on IRC channels, she's managed to get us banned from any channel we take her in. Some channels are quick to spot her..others even after she's banned don't realize She is not human. Just a Bot with a nasty attitude. I will be also making available Nice scripts for her. File Serve scripts, Joke Scripts. FAQ Serving scripts. She is quite customizable.

She can be alot of fun!

1.5 CyberShiela.guide/System Requirements

-- CyberShiela's System Requirements --

AmIRC 3.0 or Newer 2.2 will not work
An Amiga Computer
Internet Connection
IRC Server that you can connect to
Strange Sense of Humor doesn't hurt either.

Basically, if you run AmIRC 3.0 or newer, you can run Shiela.
Fast CPU always helps.

COMMANDS AVAILABLE TO ALL USERS

Command	Function	Example
!temp deg F/C F	Converts Farenheit to Celcius and Vice Versa	!Temp 45
!abbr abbreviation abbr lol	Shows you the Meaning of an IRC Abbreviation	!
!8ball question ?	Ask the Magic 8-Ball a Question	!8ball Am I Here
!whois nick	Spoof of a Whois Command	!whois Zonkerz
!cc countrycode Abbrv !cc uk	Country Code lookups - Shows what Country matches the	
!time	Displays the Current time on the computer Shiela is On.	!time
!quote quote	Displays a Random Quote from Amongst Hundreds - Various	!
!ping me!	Have Shiela Ping you. For Lag Checking	!Ping Me!
!ping {nick} ping Zonkerz	Have Shiela Ping another user and display results	!
!scramble to play the game scramble	Play a Game of Word Scramble with Shiela.	!
!hangman to play the game	Play a Game of Hangman	!hangman
!games	Displays a List of Games that Shiela can Host	!games
!flist	Shows in Channel Files Available for Download	!flist
!fget #	Get a File from her Flist display	!fget 3
!seen {nick} Zonkerz	Simple Seen Command for when a user was last on	!seen
!shot {beverage}	Have Shiela Serve you a Beverage	!Shot Tequila
!lapdance	Shiela will come up and give you a LapDance ;)	!lapdance
!blowme	well give it a shot, what can I say.	!blowme

```

!chanstat          Displays a list of Channel Statistics to the channel      ! ←
  chanstat
!version           Displays Shiela's Version to the Channel                !version
!food {food descript}  Have Shiela Serve you some Food                    !Food ←
  Maggot Pie
!hug {nick}        Shiela will hug whoever you tell her                  !hug luvbabe
!kiss {nick}       Shiela will kiss whoever you tell her                !kiss luvbabe
!givebeer {nick}    Shiela will give whoever you tell her a beer        ! ←
  givebeer Fred
!jukebox {song}     Shiela will go over to the juke box and play {song} ←
  !jukebox evil eyes
!giverose {nick}    Shiela will give {nick} a rose for you                !giverose ←
  Minniie
!askdance {nick}    If your too shy to ask someone to dance, shiela will for ←
  ya  !askdance Minniie

```

ADVANCED MASTER LEVEL COMMANDS

Command	Function	Example
=====	←	←
=====		←
=====		
!clearscramble	If the Word Scramble Game goes Haywire use this to clear it	←
. !clearscramble		
!addmaster user@host	Add a user to the Master User List	!addmaster ←
*!*dar@*.net		
!remmaster user@host	Removes a user from the master user list	! ←
remmaster *!*dar@*.net		
!diagnostic	Very basic diagnostic, doesn't really do much yet.	! ←
Diagnostic		
!listmasters	Displays to you a list of the master users in private	! ←
Listmasters		
!botquit	Quits Cybershiela! (now why would you wanna do that?)	! ←
botquit		
!reload	Reloads Shiela's Config/Personality File	!reload
!goto channel #channel	Send shiela out into the world or another channel.	←
!goto channel #win95		
!ai on/off	Turns Shiela's Artificial Insanity interactive mode on/off	←
!ai on !ai off		
!autovoice on/off	If shiela has ops you can have her voice all users upon	←
enter !autovoice on		
!autotopic	Have shiela display one of the preinstalled random topics	←
!autotopic		
!opme	If shiela has ops and your a master user. She will op you.	! ←
opme		
!advertise {message}	Have shiela go into each channel in your roomsad.cfg	←
file !advertise Join #sex!Fun!		
!restart	Causes Shiela to Quit and Reload - Good if your modifying her	! ←
restart		
!setuser {nick} {mode}	Set a users Flags in the Seen /autoop list	OVB ←
!setuser zonkerz 0		
	V=Voiced B=Banned O=Opped upon entry	

```
!autogreet on/off      Turns Shiela's SEEN Autogreet On or Off (default is Off) ←  
!autogreet on
```

Modifying Shiela

1.8 mod

How to Modify CyberShiela

This is not for the tame of heart or those inexperienced in editing scripts

The Most straightforward way of modifying her is to alter her arexx code. I won't ←
even go into how to do that
your on your own if you go that route.

Altering Her Personality File

Location of File: Amirc/rexx/cscfg/cybershiela.cfg

each recognized word / response is 2 lines in the config

Example:

```
Hello  
Hey $1, whats up??!
```

if she sees Hello, she will respond with Hello {nick} whats up. \$1 will be ←
replaced by the persons nick who
wrote the Initial Hello.

Just make sure you always have 2 lines for each. keyword/response

She looks in a first come first order first...therefore

if you put

```
why  
What do you mean Why $1?!  
Why are you Mad  
I'm not mad $1, are you?
```

She would see the first Why and never see the 2nd statement using Why. so place ←
 your keywords strategically
 in the config file.

 Macros & More

These can be used in the Cybershiela.cfg file and are replaced by the program when ←
 in use.

Macro Function

 \$1 User Nick She speaking to
 \$chan Channel Name she is in

MultiResponse Scripts

Don't want shiela to just use one Response? but would rather
 her have a variety of responses to one keyword. This too is
 fairly easy to achieve. Using a 2nd Arexx program ie.

cs_hello.amirx placed in amirc/rexx/cs/

example in cybershiela.amirx

hello
 /rx cs/cs_hello.amirx

I've included in the archive a program that will help
 making these multiresponse scripts alot easier.

This script requires rexxreqtools.library to run.
 (see

MultiTextmaker.rexx
 for more information.)

You may also have her execute other Arexx scripts
 ie.

!blond joke
 /rx blondejokes.amirx

if you had such a file in your amirc:rexx/ she would
 run the blonde joke amirx file upon being told !blond joke

Shiela is also capable of sending files.

ie.

!FAQ AMIGA
 /dcc send \$1 dh0:faq/amigafaq.guide

She can Op, Kick, Play sounds, just about anything you can do in AmIRC from command line, she can do to. Your Imagination is the only limit.

```
-----  
Roomad.cfg  
-----
```

This file contains a list of Rooms

ie

```
#starcafe  
#amirc  
#windows95  
#wildsex  
#friends
```

for when you send shiela off to Advertise using the !advertise command, she will ↔ enter each room in the list and display the given message to the channel then leave and head to the next one. ↔
Returning to her original channel when she is finished.

What is CyberShiela

System Requirements

Features

Commands

Modifying Shiela

1.9 multitext

Using MultiTextMaker.Rexx

I've included this file in with the cybershiela archive for those of you that would like to make your own multi-response amirx files for shiela.

Requirements:

```
RexxReqTools.library  
RexxMast(should be running already on most Amigas)
```

How To Use:

Create a Text file with multiple lines of text that you would like her to use as reponses to Keywords Again, you may use the Macros in these texts as well just use no more than 1 of each macro per line.

Example Text File:

```
ok
where you going?
me too, smoke time!
when you coming back. miss ya already! ;)
```

Example Of what MultiTextMaker creates

```
/* CyberShiela MultiResponse File */
nick=getclip('NICK')
xx=random(1,4,time('s'))
select
when xx=1 then a="ok"
when xx=2 then a="where you going?"
when xx=3 then a="me too, smoke time!"
when xx=4 then a="when you coming back. miss ya already! ;)"
end
modif:
user=nick
old=a
m=length(user);temp=a;x=pos("$1",temp);if x~=0 then do;temp2 = delstr(temp,x,2)
old = insert(user,temp2,x-1,m," ");end
temp=old;m=length(channam);x=pos("$chan",temp);if x~=0 then do;temp2 = delstr(temp ←
,x,5)
old = insert(channam,temp2,x-1,m," ");end
a=old
'say 'A
exit
```

You would then place this file in your Amirc/rexx/cs/ folder where you keep all your shiela response files, and then call it from her cybershiela.cfg file as shown in modifying cybershiela section.

Create your file as shown Above. Save to Ram: ie RAM:brb.txt

Run the MultiTextMaker program(double clicking it works fine)

When it asks for input file Find the brb.txt using the requester The next requester that comes up asks what to name your output file.

cs_brb.amirx would be the best for this example file. Always be sure to give it a .amirx extension.

Then copy it to your amirc/rexx/cs/

and use anywhere in her cybershiela.cfg that you would like it to call this file.

I made this script because i really got tired of writing each multi-response by hand. And I hope it is of use to someone :) If you would like, you can submit your Multireponse files and i will include them on the website for others to download.

email submissions to cs_submit@starcafe.org
