1.2 Distribution

JT_TTT is Freeware and can be copied and spread anywhere as long as all files are in the archive and are not modified.

Attention: although the **author** has tried to prevent errors, he can't guarantee that this software is 100% reliable.

You are therefore using this material at your own risk. The author cannot be made responsible for any damage which is caused by using this software.

This archive should contain:

JT_TTT.doc

JT_TTT.guide right you are reading it ;-)

JT_TTT_1 The ASCII AmigaBASIC parts

JT_TTT_2

1.3 Installation

1) Copy this drawer to a place of your harddisk or a disk.

2) Copy the files

graphics.bmap

diskfont.bmap

to this drawer. You find this files on your Extras1.3-Disk.

3) Change the Default Tool of JT_TTT_1 to the path

where AmigaBASIC is installed. For example:

"Work:AmigaBASIC/AmigaBASIC".

4) Open the file JT_TTT_1 and edit the line:

```
LOAD "JT_TTT_2",R
```

change this to the full path of the file.

That's it.

I hope it wasn't to complicate.

1.4 OS 3.0 +

Here are some useful hints how to use AmigaBASIC with OS 3.0 or higher.

- Switch "Make Sound" off -> Sound Preferences

otherwise the BEEP command will cause a crash.

- If it still won't run correctly you can try:

disable the cpu caches -> Shell command "cpu nocache"

disable Fastmem -> System/NoFastMem

- PtchAmigaBASIC.lha

patches AmigaBASIC to run with a 020 CPU or higher.

You can find it on Aminet in dev/misc.

1.5 Playing

Your goal is to get a line, horizontal, vertical or diagonal with your symbol on a field 3x3.

The menu:

Start Start one game

Stop Stop the current game

Players Choose 1 or 2 player mode

Names Type in your name

Quit ???

1.6 Bugs

The same thing as usual:

There should be no bugs. If you find one let me know.

1.7 History ...

This is the first Aminet-Release. So there's not much to say here.

Only one thing: IMHO the gadget stuff is cool! :-)

1.8 >>> Author <<<

If you have any question, bug report, compliment ;-)

send it to:
