## Partial

### 1.1 Index of all Fish files this CD

=====  
This is disk 700 of the freely distributable AMIGA software library.

=====  
This is disk 701 of the freely distributable AMIGA software library.

=====  
This is disk 702 of the freely distributable AMIGA software library.

DoubleSquares A game played on a 10x10 board, where the goal is to set as many tiles on the board as possible. There are 100 different color combinations for a single tile, and rules which control where tiles may be place. Shareware, binary only.

Author: Manfred Kopp

game/think/doublesquares.lha Readme

PointToPoint A board game where each player gets to alternately set one of his stones on the board until the last field is occupied.

The goal of the game is to enclose as many stones of the opponent as possible. Version 1.1, shareware, binary only.

Author: Manfred Kopp

game/2play/pointtopoint.lha Readme

This is disk 703 of the freely distributable AMIGA software library.

=====  
This is disk 704 of the freely distributable AMIGA software library.

---

=====  
This is disk 705 of the freely distributable AMIGA software library.

CrossMaze A crossword puzzle game where the player is given the words but no clues. The object is to find a way to place all the words back into the puzzle. Options include 10, 20, or 30 word games with one or two players. Version 1.0a, an update to version 1.0 on disk 694. Binary only.  
Author: James Butts  
game/misc/CrossMaze.lzh           Readme

=====  
This is disk 706 of the freely distributable AMIGA software library.

AUSH A new command line interpreter, designed to replace the CBM shell. Features include file name completion, pattern expansion, expression computation, command history, for...done loops, and much more. Almost fully compatible with ARP or Commodore shells. This is version 1.42, with full support of AmigaDOS 2.04, a heavily modified parser, "pure" code, a few Enforcer/Mungwall hits removed, and other bug fixes and enhancements. Requires "arp.library" under 1.3. Binary only.  
Author: Denis GOUNELLE  
util/shell/AUSH\_v317.lha           Readme

WalkingMan A small screen hack that makes a variable number funny men appear on the WorkbenchScreen and CustomScreens. They move depending on the graphics shown and changing graphics will be noticed by them. Includes source.  
Author: Jan P. Katz  
game/gag/walkingman.lha           Readme

=====  
This is disk 707 of the freely distributable AMIGA software library.

AMines A small game, like the X-Window's game XMines. The aim of the game is to detect all of the 99 mines in a 30 by 16 playing field. Selecting a field uncovers a number that indicates how many of the adjacent fields contain mines. This is version 1.1, binary only.  
Author: Manfred Huesmann  
game/think/AMines12.lha           Readme

Aniso A small puzzle game for your Workbench screen, similar to the "Brain game". Played in a small window containing two 3 by 3 grids. One grid is already filled with numbers between one and four, and the other is empty. The goal is to form an image of the first grid by clicking on squares in the empty grid. Includes source.  
Author: Barry McConnell  
game/wb/aniso.lha                 Readme

This is disk 708 of the freely distributable AMIGA software library.

---

This is disk 709 of the freely distributable AMIGA software library.

LittleBoulder A "Pick'n Run" Action-game, which contains eight different levels to be completed within a certain time limit. This is version 1.0, binary only.

Author: Carsten Magerkurth  
game/jump/littleboulder.lha Readme

ThinkAMania A 'Concentration' like board game. It features excellent hires graphics, funny sound effects and enormous fun for up to two players regardless of age and education. This shareware version is 100% functional, but does include a requester that pops up from time to time to remind you of the shareware fee. All options are available and the complete set of stones is integrated. Version 2.9, an update to version 2.1 on disk 541. Binary only.

Author: Thomas Schwoeppe, Dirk Respondek  
game/think/thinkamania297.lha Readme

## 1.2 Index of all Fish files this CD

---

This is disk 710 of the freely distributable AMIGA software library.

AntiCicloVir A link virus detector that detects 25 different such viruses. Version 1.5, an update to version 1.3 on disk 664. Shareware, binary only.

Author: Matthias Gutt  
util/virus/AntiCicloVir.lha Readme

CryptoKing A game for those who like to solve Cryptograms, (those coded sentences that have to be decoded to be read). Operate with keyboard or mouse. This is Version 1.1, an update to Version 1.0 on disk 609. Shareware, binary only.

Author: Robert Bromley  
game/misc/CryptoKing.lha Readme

---

---

---

This is disk 712 of the freely distributable AMIGA software library.

=====

This is disk 713 of the freely distributable AMIGA software library.

MathsAdv A simple game where you, the young adventurer, must try to escape the king's Maths Adventure. To do this you must pass through a series of rooms. In each room you are given a math problem to solve, after which you can proceed to the next room if you answer correctly. The problems become more involved and more difficult in each room. This is an update to the version on disk 602. Includes source.

Author: Jason Lowe  
game/role/MathsAdv.lha           Readme

=====

This is disk 714 of the freely distributable AMIGA software library.

JoeyDemo A demo version of a Sokoban type game where your task is to push Grullies (the only food of the Joey) to the stock, which is designated with little rhombic symbols on the floor. To complicate things there are iceblocks and teleporters. The demo version contains 5 levels while the registered version contains 60 levels. Shareware, binary only.

Author: Richard Ziegler, Roland Schreiner  
game/demo/JoeyDemo.lha           Readme

=====

This is disk 715 of the freely distributable AMIGA software library.

LhA A very fast archiver that is compatible with MS-DOS LhArc V1.13 and LHA V2.13, as well as the Amiga LhArc. LhA is very memory efficient, has been written with stability and reliability in mind, has carefully optimized compression and decompression routines, is multitasking reentrant and pure, handles multiple volume archives (registered version only), and more. Version 1.32, an update to version 1.22 on disk 637. Shareware, binary only.

Author: Stefan Boberg  
misc/unix/lha\_1\_00\_tar.Z           Readme

=====

This is disk 716 of the freely distributable AMIGA software library.

ReOrg ReOrg is a fast disk optimizer that can be used for floppy disks and hard disks. Supports new Kickstart 2.04 features including hard and soft links and High-Density drives. Includes program versions in English and German for use with Kickstart 2.04 only. This is version 2.31, an update to ver-

This is disk 722 of the freely distributable AMIGA software library.

=====  
This is disk 723 of the freely distributable AMIGA software library.

EternalRome A historical strategy game, that in spite of its high complexity is fast and easy to play. Fully mouse controlled with a fine zoomable map of the Roman empire (overscan and interlaced options). The simulation delivers many historical insights because of its accuracy (may be used for educational purposes) and is a challenging and entertaining game for two or more players (also interesting for solitary studies). Version 1.1, an enhanced update to version 1.0 on disk 502. Tryware, binary only.

Author: Sven Hartrumpf  
game/think/EternalRome.lha    Readme

=====  
This is disk 724 of the freely distributable AMIGA software library.

=====  
This is disk 725 of the freely distributable AMIGA software library.

Mine     A new Modula-2 implementation of an old computer game. You have an N \* N square with mines hidden in some fields. Your job is to mark them with a flag as fast as possible. High-score lists are supported. Important parts of the source code are included. Requires AmigaDOS 2.0.

Author: Thomas Ansorge  
game/think/Mine.lha            Readme

Term     A gift-ware telecommunications program written for AmigaOS 2.0 or higher. Features include total configurability, full ARexx control, Xpr-transfer support, filetype-identification after download, cut & paste/point-and-click on screen, auto upload and download, unlimited size scrollable review buffer, solid and fully-featured VT100/VT220/ANSI emulation, optional fast atomic terminal emulation, hotkey support, powerful phonebook and dialing functions, ability to save and print the contents of the screen as IFF-ILBM or ASCII file, full overscan and screen resolution support (new ECS screen modes included), asynchronous operation and a lot more. This is version 2.3, an update to version 2.2a on disk 681. Includes full source. Because of its size, it is distributed on two disks. This is part 1 of 2. Part 2 is on disk 730.

Author: Olaf 'Olsen' Barthel  
comm/term/term42Doc.lha        Readme

=====

This is disk 726 of the freely distributable AMIGA software library.

=====  
This is disk 727 of the freely distributable AMIGA software library.

Adventure The Colossal Cave Adventure, by Donald Woods and Will Crowther. This program runs from the CLI or Workbench, and is virtually identical to the original mainframe classic. This is version 1.10, an update to version 1.00 on disk 659. Binary only.  
Author: Donald Woods, Will Crowther; ported by Tony Belding  
game/role/adventure.lha        Readme

=====  
This is disk 728 of the freely distributable AMIGA software library.

501 This program keeps score for the dart game 501. Games recorded via the keyboard create a data base reflecting each player's performance. The statistics track personal bests, averages, win percentages and high scores. Written and compiled using HiSoft Basic Professional. Version 1.15, an update to version 1.12 on disk 651. Binary only.  
Author: Gilles Lepage  
game/misc/501.lha            Readme

LastRefuge A fast action game, written entirely in assembler. Takes over the entire machine and loads off a special bootable disk. Uses lhwarp (included) to regenerate the bootable game disk. Binary only.  
Author: Carsten Tag  
game/shoot/LastRefuge.lha    Readme

=====  
This is disk 729 of the freely distributable AMIGA software library.

BBBBS Baud Bandit Bulletin Board System. Features include up to 99 file libraries with extended filenotes, up to 99 fully threaded message conferences, number of users, files, messages, etc. are only limited by storage space, controlled file library and message conference access for users and sysops, interface to extra devices like CD-ROM and others, all treated as read only, complete Email including binary mail, and multiple forwarding, user statistics including messages written, files uploaded or downloaded, time, etc, plus much more. Version 5.4, binary only.  
Author: Richard Lee Stockton  
comm/bbs/BBBBS84.lha        Readme

KingFisher A specialized database tool providing maintenance and search capabilities for the descriptions of disks in the format used by this library. KingFisher's database can span multiple (floppy) disk volumes, can be edited by text editors that support long text lines, can add disks directly from unedited email or usenet announcements, can remove disks, rebuild a damaged index, find next or previous software versions, print or export (parts of) the database, and more. Includes a database of disks 1-770. This is version 1.11. Binary only.

Viewtek A feature packed Picture/Animation Viewer. Shows most ILBM's (including 24-bit ILBM's), most Compuserve GIF format images, most JFIF format JPEG images and most ANIM Op-5 format animations, with support for different palettes for each frame. Supports SHAM, CTBL, and PCHG images, full support of ECS/AGA display modes (ie. show 256 color GIF's directly, show 800x600 HAM animations, etc.). Supports viewing contents of clipboard. Iconifies to a Workbench AppIcon. Includes a version written for GVP's Impact Vision 24, to support true 24-bit display. Version 1.02, requires Workbench 2.04+, binary only.

UChess     A powerful version of the program GnuChess version 4 for the  
Amiga. Plays a very strong game of chess. Code has been re-  
written and data structures re-organized for optimal efficiency  
on 32 bit 68020 and better Amiga systems. Fully multitasking,  
automatically detects and supports 640X480X256 color AGA mode  
machines, and does not at any time BUSY wait. Requires a 68020  
/030/040 based Amiga computer system with AmigaOS 2.04 or later  
and 4 Meg of ram minimum. Special "L" version optimized for  
68040 and requires 10 Meg of ram minimum. Supports a variety  
of standard features such as load, save, edit board, autoplay,  
swap sides, force move, undo, time limits, hints, show think-  
ing, and a supervisor mode that will allow two humans to play  
with the computer acting as a "supervisor". Version 2.04,  
includes source.

AmigaBase A hierachical, programmable, in-core database. Features  
include two display methods, filter datasets, search datasets,  
print datasets, and many more. Nearly everything can be real-

ized by programming AmigaBase. Datatypes can be Integer, Real, Boolean, String, Memo (Text), Date and Time. Number of datasets is only limited by available memory. Lacking documentation, (available with shareware submission) but full Intuition interface make many operations quite obvious. Also includes some example projects. Runs under OS 1.3 and 2.0, shareware, binary only.

HackLite An evolved version of the public domain game Hack, written by Jay Fenlason, Andries Brouwer, Don Kneller and various others. Hack Lite is a dungeon adventure game in the style of Rogue, Hack, Moria, etc. It uses a customizable graphical dungeon display. The package includes a simple-to-use installation program, and a "Preferences"-style configuration editor. Many new objects, traps, monsters and ways to die have been added. Saved games are now much smaller, and a "Tournament mode" allows several players to compete for the highest score playing in identical dungeons. Utilities included with Hack Lite were written by Jim Cooper and Doug Walker.
