### 1.1 The fonts on Aminet

The fonts on Aminet CD 10

There are far more than 2000 different fonts on this CD. One can roughly categorize as screen fonts, suitable for graphic displays, and the scalable printer fonts. In detail, these are:

Screen fonts (bitmapped):

- Fixed width screen fonts (e.g. for editors)
- Proportional bitmap fonts for on screen use
- Color fonts, e.g. for use with paint programs

The Printer fonts (scalable) exist in three versions:

- Adobe Postscript fonts. Scalable, high quality.
- Compugraphic Intellifont fonts. The OS understands this format
- Bitmap versions of some sizes, for older OSes and for speed

These fonts come in archives of about 40 each. There is an index image for every archive so you can quickly view large numbers of fonts. And here comes the complete list of font directories:

- text/bfont Bitmap fonts
- text/font Fonts of all formats
- text/ifont Compugraphic IntelliFonts
- text/pfont Adobe Postscript fonts
