UUPC/extended 1.11v Tilde Command

Subcommands available while sending mail:

```
~a      Insert standard signature file.
~A      Insert alternate signature file.
~e      Invoke editor on current message.
~m item Include body of message(s) defined by item,
        indented.
~M item Include message(s) define by item with headers,
        indented.
~f item Include body of message(s) defined by item,
        unindented.
~F item Include message(s) define by item with headers,
        unindented.
~p      Print message entered so far using external
        pager.
~P      Print message entered so far.
~r file Read in an arbitrary file.
~s      Add new subject or replace existing subject with
subject "subject"
~v      Alias for ~e command (for compatibility with
        UNIX sendmail).
~?      Display this mail subcommand list.
~|cmd   Filter message entered so far through "cmd"
~!cmd   Execute command (does not alter message)
```

Note: The ~m and ~M commands use the same syntax to describe for items as the main mail parser; this allows specifying message number(s), user id, or subject. See [mail.hlp](#) for a detailed description of the allowed syntax.
