

CLUB CYBERLESQUE

INSTALLATION:

(Hard drive installation on the Macintosh is optional)

PROGRAM

The CLUB CYBERLESQUE requires Apple's QuickTime, which is included on the disc. It should be copied to the "Extensions" folder in your System folder.

To install, copy the appropriate Club Cyberlesque file to your hard drive.

Simply double-click on the Club Cyberlesque icon to launch the program. Be sure the CD-ROM is in the drive.

INSTALLING QUICKTIME

If you don't have QuickTime 1.6.1 or 2.0 already installed on your system, you'll find a copy of QuickTime 2.0 in the "Put Contents in System Folder" folder on the disc. Drag and drop the "QuickTime" over your current System folder. The computer will ask if you want to copy QuickTime into the Extensions folder. Click on "Yes" and restart the computer after the computer finishes copying QuickTime.

For optimal viewing, you should play this disc on a fast CD-ROM drive (350 millisecond or faster access rate). It will also help if you turn off all unnecessary INITs and extensions. If you have an LC or similar computer, disabling AppleTalk will also help increase the play-back rate.
