WebMorsels(tm) 2: Building Blocks

Welcome to WebMorsels. WebMorsels is a series of professionally designed, coordinated clip media elements created specifically for World Wide Web pages. Each volume of WebMorsels includes bullets, buttons, background tiles, headers and other useful design bits. Combine WebMorsels in HTML documents to build cool, cohesive home pages and web sites.

WebMorsels Building Blocks contains over 1100 individual design elements to spice up any web site. All elements are supplied in standard interlaced GIF89a format. Many non-rectilinear files are provided in our dual-transparency format, providing exceptional appearance and visual integration right off the disc. We have also included multi-layered Adobe Photoshop source files, giving you unparalleled flexibility for customizing your web pages.

The WebMorsels user manual is supplied in print, HTML and Adobe Acrobat(R) PDF format. It describes in detail the WebMorsels product, how to use the HTML-based image catalog and how to integrate WebMorsels elements into your web pages.

The PDF document can be found in the following directory:

The use of Adobe Acrobat and the Portable Document Format (PDF) at Image Club is integrated with nearly all of our information distribution tasks. Because of Acrobat, we are not as reliant on laser printers, imagesetters, offset presses, paper or postage costs to publish & distribute our internal documents, product information or graphic samples. Everything from text & simple line drawings to EPS clip art & the richest, full color digital photographs can be distributed using the PDF format. Acrobat allows fast access to images

or text with the same level of quality as the original document, independent of computer platform. All in a standardized, flexible digital format.
