Economy (Belarus)

=====

Overview:

In many ways Belarus resembles the three Baltic states, for example, in its industrial competence, its higher-than-average standard of living, and its critical dependence on the other former Soviet states for fuels and raw materials. Belarus ranks fourth in gross output among the former Soviet republics, having produced 4% of the total GDP and employing 4% of the labor

force in the old USSR. Once a mainly agricultural area, it now supplies important producer and consumer goods - sometimes as the sole producer - to the other states. Belarus had a significant share of the machine-building capacity of the former USSR. It is especially noted for production of tractors, large trucks, machine tools, and automation equipment. The soil in

Belarus is not as fertile as the black earth of Ukraine, but by emphasizing favorable crops and livestock (especially pigs and chickens), Belarus has become a net exporter to the other former republics of meat, milk, eggs, flour, and potatoes. Belarus produces only small amounts of oil and gas and receives most of its fuel from Russia through the Druzhba oil pipeline and the Northern Lights gas pipeline. These pipelines transit Belarus en route to Eastern Europe. Belarus produces petrochemicals, plastics, synthetic fibers (nearly 30% of former Soviet output), and fertilizer (20% of former Soviet output). Raw material resources are limited to potash and peat deposits. The peat (more than one-third of the total for the former Soviet Union) is used in domestic heating, as boiler fuel for electric power stations, and in the production of chemicals. The potash supports fertilizer

production. In 1992 GDP fell an estimated 13%, largely because the country is highly dependent on the ailing Russian economy for raw materials and parts.
