```
Overview:

The UK is one of the world's great trading powers and financial centers, 
and
its economy ranks among the four largest in Europe. The economy is
essentially capitalistic; over the past thirteen years the ruling Tories
have greatly reduced public ownership and contained the growth of social
welfare programs. Agriculture is intensive, highly mechanized, and 
efficient
by European standards, producing about 60% of food needs with only 1% of 
the
labor force. The UK has large coal, natural gas, and oil reserves, and

primary energy production accounts for 12% of GDP, one of the highest
     shares
  of any industrial nation. Services, particularly banking, insurance, and
  business services, account by far for the largest proportion of GDP while
  industry continues to decline in importance, now employing only 25% of the
  work force and generating 21% of GDP. The economy is emerging out of its
  3-year recession with only weak recovery expected in 1993. Unemployment is
  hovering around 10% of the labor force. The government in 1992 adopted a
  pro-growth strategy, cutting interest rates sharply and removing the pound
  from the European exchange rate mechanism. Excess industrial capacity
  probably will moderate inflation which for the first time in a decade is
  below the EC average. The major economic policy question for Britain in the
  1990s is the terms on which it participates in the financial and economic
  integration of Europe.
