Economy (Vietnam)

=====

Overview:

Vietnam has made significant progress in recent years moving away from the planned economic model and toward a more effective market-based economic system. Most prices are now fully decontrolled and the Vietnamese currency has been effectively devalued and floated at world market rates. In addition, the scope for private sector activity has been expanded, ↔ primarily

through decollectivization of the agricultural sector and introduction of laws giving legal recognition to private business. Despite such positive indicators, the country's economic turnaround remains tenuous. Nearly three-quarters of export earnings are generated by only two commodities, rice and crude oil. Meanwhile, industrial production stagnates, burdened by uncompetitive state-owned enterprises the government is unwilling or unable to privatize. Unemployment looms as the most serious problem with over 25% of the workforce without jobs and population growth swelling the ranks of the unemployed yearly.
