Economy (Comoros)

=====

Overview:

One of the world's poorest countries, Comoros is made up of several islands that have poor transportation links, a young and rapidly increasing population, and few natural resources. The low educational level of the labor force contributes to a low level of economic activity, high unemployment, and a heavy dependence on foreign grants and technical assistance. Agriculture, including fishing, hunting, and forestry, is the leading sector of the economy. It contributes 40% to GDP, employs 80% of ← the

labor force, and provides most of the exports. The country is not self-sufficient in food production, and rice, the main staple, accounts for 90% of imports. During the period 1982-86 the industrial sector grew at an annual average rate of 5.3%, but its contribution to GDP was only 5% in 1988. Despite major investment in the tourist industry, which accounts for about 25% of GDP, growth has stagnated since 1983. A sluggish growth rate ← of

1.5% during 1985-90 has led to large budget deficits, declining incomes, ← and

balance-of-payments difficulties. Preliminary estimates for FY92 show a moderate increase in the growth rate based on increased exports, tourism, and government investment outlays.
