1.7 85.guide/Economy (Gabon)

Economy (Gabon)

=====

Overview:

The economy, dependent on timber and manganese until the early 1970s, is now ←
 dominated by the oil sector. In 1981-85, oil accounted for about 45% of GDP ←
 80% of export earnings, and 65% of government revenues on average. The high oil prices of the early 1980s contributed to a substantial increase in per capita national income, stimulated domestic demand, reinforced migration from rural to urban areas, and raised the level of real wages to among the highest in Sub-Saharan Africa. The subsequent slide of Gabon's economy, which began with falling oil prices in 1985, was reversed in 1989-90, but debt servicing obligations continue to limit prospects for further domestic development. Real growth in 1991-92 was weak because of a combination of an overstaffed bureaucracy, a large budget deficit, and the continued underdevelopment of the whole economy outside the petroleum sector.
