Bezier Curve tool	Pen tool
Freehand Drawing tool	Freehand tool
Polygon tool	Pen tool

1.2 Page/ Create

Page / Create » from Template
 Page/ Create » from Default

These commands do not have an equivalent in PageStream. Pages are created automatically, so there is no need to create page. You can change the master page used for a page, and thus its size, by choosing the Edit»Page command.

1.3 Page/ Load » New Current

Page/ Load » New Current

This command does not have an equivalent in PageStream. You can't load or save a single page, but they can be copied to the clipboard. Choose the Page Palette command to open the Page palette. Select a page in the palette and choose the Copy command. Then switch to the document to paste it into, activate the page palette and paste the page into that document with the Paste command.

1.4 Page/ Load » Template

Page/ Load » Even Template
 Page / Load » Odd Template

PageStream does not have an equivalent command to load a page and use it as a template. This is because PageStream uses master pages while ProPage lacks this concept. However, you can copy a master page to the clipboard and use it in another document. Choose the Document Structure command and select a master page. Choose the copy command. Switch documents, and choose Document Structure again. Choose Paste to put the master page in this document. Now you can use this master page as the basis for pages in this document.

1.5 Page/ Save » Current

Page/ Save » Current

PageStream does not have an equivalent command to save a single page. However, you can copy a page to the clipboard and paste it into a new document and then save it. Choose the Page Palette command. Select a page and choose the Copy command. Create a new document with the New command and reactivate the Page palette. Paste the page into the document with the Paste command and then save the document with Save.

1.6 Box/ Delete Contents

Box/ Delete Contents

PageStream does not have an equivalent command to delete the contents of a 'box' because of PageStream's generally frameless environment. If you wish to delete all the text in a column or text object, you can place the insertion point in the text, choose Select All and then delete the text with the Erase command.

If you want to delete an object, you can just use the Erase command, which will delete the object and its 'frame', since PageStream doesn't have separate frames and objects like ProPage.
