

Chapter 3 MULTIMEDIA SHOW BUILDER

Multimedia Show Builder enables you to create multimedia shows which can then be played back on your PC.

Show Builder provides complete flexibility including the ability to:

- Use any multimedia objects supported by MultiMedia Works, including audio, video, animation and graphics
- Sequence and repeat any show object
- Jump to any object in the show sequence
- Work in Manual, Auto or Mix play mode
- Select color(s) and graphic(s) to use in the background while the show is played
- Synchronize audio to an entire show or to individual objects in the show
- Select the playing time for individual or all objects
- Customize the window display characteristics for different show data types

You can even embed MultiMedia Works shows into other applications (e.g., word processing, graphic or spreadsheet programs) from which they can then be played.

Creating a Show

From the MultiMedia Works application base screen:

1. Select *Show* from the *Multimedia* drop-down menu, or select the Show button from the toolbar.

A Show Builder window, used to create Multimedia shows, will be displayed.

Notice that the entry "<Background>" (assigned to the background object) already appears in the Object List area of the show window.
