Chapter 1

Virus Info Base

1.1 BlueBox

Name : BlueBox

Aliases : No Aliases

Type/Size : Bomb/5680 (PowerPacked)

Clones : No Clones

Symptoms : No Symptoms

Discovered : 16-07-91

Way to infect: File infection

Rating : Very Dangerous

Kickstarts : 1.2/1.3/2.0

Damage : Maybe damage for MODEM-Users.

Manifestation: Pretends to be BLUEBOX-Hackprogram ?

Removal : Delete File immediately.

Comments : If your're starting the virus it tries to copy a fake icon.library in your libs-directory. This fake lib is 6680 bytes long.

If another programm now uses this fake library it startes a process with the name "input.device". Additionally a patch in \$74 interrupt will be installed. I don't know exactly what this patch does. I think this Bomb is used to damage special persons (MODEM-Users !)

It's really difficult to analyse Bombs which are used

to damage special persons... I don't have a MODEM.
This are the only facts I can say about this BlueBox.

Click on this gadget to see a Demo of the BlueBox
virus. Push left mouse button to return.
