Chapter 1

Virus Info Base

1.1 BRET-HAWNES

Name : BRET-HAWNES

Aliases : No Aliases

Type/Size : File/2608

Clone : BEETHOVEN

Symptoms : After 20 Minutes a message.

Discovered : ?

Way to infect: File infection

Rating : Harmeless

Kickstarts : 1.2/1.3/2.0

Damage : Tracks will be damaged.

Manifestation: -

Removal : Delete File.

Comments : If you are starting the BRET-HAWNES virus it copies itself always to the same memory-address \$7F000. After that it installs a new intrerrupt in the Zero-Page (\$6C). To stay resident it uses the KICK Vectors & to infect other disks it finally patches the OpenNewLib()-Vector. If you are now booting with an unprotected disk the virus creates the virusfile in the ROOT-Dir with the name: \$COA0E0A0C0. (If you make a dir you can see strange signs !!) Then it modifies the Startup-Sequence with the virusname. After 20 Minutes the virus gives out a message which says the following (over the new \$6C interrupt!):

GUESS WHO`S BACK ??? YEP. BRET HAWNES BLOPS YOUR SCREEN
I`VE TAKEN THE CONTROLL OVER YOUR AMIGA!!!
THERE`S ONLY ONE CURE: POWER OFF AND REBOOT ! ! ! !

After the 10th infection tracks will be damaged.

Click on this gadget to see a Demo of the Bret-Hawnes
virus. Push left mouse button to return.
