Comments      : After you started the  ByteParasite 3 the virus opens
                a window with the title:

                "Virus-Checker V3.0 by Michael Ortmanns"

                Click on this gadget if yo want to see a  Demo
                virus. Push left mouse button to return.

                NOW, the virus tries  to open df0:c/Virus-Checker. If
                this  programm  exist, the  virus  copies  itself  to
                df1:c/Virus-Checker.  Additionally  the virus patches
                the following verctors: KICK, Cool & $6C.w Interrupt.
                These patches causes trips to india (GURU).
                The  ByteParasite  Viruses  are  very boring  and bad
```

coded. Look above and you will see what I mean. Just
imagine the user haven't got a second drive (DF1:)
then the System will pop up a requester telling you
to insert DF1. You can't say more about such damn
viruses like the Byte Parasite.
