Chapter 1

Virus Info Base

1.1 F.A.S.T. 1

Name : F.A.S.T. 1

Aliases : No Aliases

Type/Size : Boot/1024

Clone : No Clones

Symptoms : An alert will be shown

Discovered : 26-12-90

Way to infect: Boot infection

Rating : Harmeless

Kickstarts : 1.2/1.3

Damage : Overwrites boot.

Removal : Install boot.

Comments : The F.A.S.T. 1 virus is a very harmless virus. It always copies itself to the same memory address (\$7f000). It patches the DoIO() and FreeMem()-Vector. The DoIO()-Patch is used to infect other disks and the FreeMem()-Patch sets the coolcapture always to the virus value.

After After the counter in the bootblock has reached 10 an alert will pop up with the following text:

W A R N I N G

If you pirate software you are a thief.
Thieves will be prosecuted.
Any information should be passed to:

The Federation Against Software Theft
Telephone: +44-1-240-6756

P I R A C Y I S T H E F T

Click on this gadget to see a Demo of the F.A.S.T virus. Push left mouse button to return.

You cannot read this alert in the bootblock because its always coded depending of on byte from \$DFF006. The virus only infects your disk if you are trying to write a bootblock on it. In the decoded bootblock you can read the following text:

Note to Paranoimia: The early release of X-Out was no exception so stop pretending that you "help" us by delaying cracks.

A.D 02-94 & TBH 04-94
