## Chapter 1

# Virus Info Base

### 1.1 Grimlin

Name : Gremlin

Aliases : No alias

Type/Size : Boot virus/ 1024 bytes

Discovered : 16-10-90

Way to infect: See below

Rating : Not very dangerous

Kickstarts : 1.2/1.3/2.0

Damage : Overwrites bootblock

Manifestation: DisplayAlert

Removal : Install the virus bootblock

Comments : If you are booting with a GREMLIN-Virus infected disk the virus copies itself to \$7F400. To infect other disks the virus patches the DoIO()-Vector. Additionally the virus changes the CoolCapture to stay resident in memory. Finally the virus patches the SumKickData-Vector from the exec.lib.

If a value reaches 20480 the virus executes an endless routine & shows some colors. After the 16.th reboot the virus gives out a GFX-Message. (Red Screen + White Letters) and you will get the following graphic message on your screen:

GREMLIN (at a red background)
